PPP1R35 Antibody - N-terminal region - Protein Information**Name** PPP1R35 ([HGNC:28320](#))**Function**

During centriole duplication, plays a role in the centriole elongation by promoting the recruitment of the microtubule-binding elongation machinery through its interaction with RTTN, leading to the centriole to centrosome conversion (PubMed: [30168418](http://www.uniprot.org/citations/30168418), PubMed: [30230954](http://www.uniprot.org/citations/30230954)). In addition, may play a role in the primary cilia assembly (By similarity).

Cellular Location

Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Cytoplasm, cytoskeleton,

microtubule organizing center, centrosome, centriole Note=Recruited to the nascent daughter centriole early in the duplication cycle and localizes to the proximal centriolar lumen just above the cartwheel (PubMed:30168418, PubMed:30230954). Co-localizes with RTTN at the centriole (PubMed:30168418)
