

HTR1B / 5-HT1B Receptor Antibody (Internal)
Rabbit Polyclonal Antibody
Catalog # ALS10136**Specification**

HTR1B / 5-HT1B Receptor Antibody (Internal) - Product Information

Application	IHC
Primary Accession	P28222
Reactivity	Human, Monkey
Host	Rabbit
Clonality	Polyclonal
Calculated MW	44kDa KDa

HTR1B / 5-HT1B Receptor Antibody (Internal) - Additional Information**Gene ID** 3351**Other Names**

5-hydroxytryptamine receptor 1B, 5-HT-1B, 5-HT1B, S12, Serotonin 1D beta receptor, 5-HT-1D-beta, Serotonin receptor 1B, HTR1B, HTR1DB

Target/Specificity

Human 5HT1B Receptor. BLAST analysis of the peptide immunogen showed no homology with other human proteins.

Reconstitution & Storage

Long term: -70°C; Short term: +4°C

Precautions

HTR1B / 5-HT1B Receptor Antibody (Internal) is for research use only and not for use in diagnostic or therapeutic procedures.

HTR1B / 5-HT1B Receptor Antibody (Internal) - Protein Information**Name** HTR1B**Synonyms** HTR1DB**Function**

G-protein coupled receptor for 5-hydroxytryptamine (serotonin). Also functions as a receptor for ergot alkaloid derivatives, various anxiolytic and antidepressant drugs and other psychoactive substances, such as lysergic acid diethylamide (LSD). Ligand binding causes a conformation change that triggers signaling via guanine nucleotide-binding proteins (G proteins) and modulates the activity of down-stream effectors, such as adenylate cyclase. Signaling inhibits adenylate cyclase activity. Arrestin family members inhibit signaling via G proteins and mediate activation of alternative signaling pathways. Regulates the release of 5-hydroxytryptamine, dopamine and acetylcholine in the brain, and thereby affects neural activity, nociceptive processing, pain perception, mood and behavior. Besides, plays a role in vasoconstriction of cerebral arteries.

Cellular Location

Cell membrane; Multi-pass membrane protein

Tissue Location

Detected in cerebral artery smooth muscle cells (at protein level). Detected in brain cortex, striatum, amygdala, medulla, hippocampus, caudate nucleus and putamen.

Volume

50 µl

HTR1B / 5-HT1B Receptor Antibody (Internal) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

HTR1B / 5-HT1B Receptor Antibody (Internal) - Images

Anti-5HT1B Receptor antibody ALS10136 IHC of human vessel.

Anti-5HT1B Receptor antibody ALS10136 IHC of human prostate.

HTR1B / 5-HT1B Receptor Antibody (Internal) - Background

G-protein coupled receptor for 5-hydroxytryptamine (serotonin). Also functions as a receptor for ergot alkaloid derivatives, various anxiolytic and antidepressant drugs and other psychoactive substances, such as lysergic acid diethylamide (LSD). Ligand binding causes a conformation change that triggers signaling via guanine nucleotide-binding proteins (G proteins) and modulates the activity of down-stream effectors, such as adenylate cyclase. Signaling inhibits adenylate cyclase activity. Arrestin family members inhibit signaling via G proteins and mediate activation of alternative signaling pathways. Regulates the release of 5-hydroxytryptamine, dopamine and acetylcholine in the brain, and thereby affects neural activity, nociceptive processing, pain perception, mood and behavior. Besides, plays a role in vasoconstriction of cerebral arteries.
