

GPR44 / CRTH2 Antibody (Extracellular Domain)

Rabbit Polyclonal Antibody Catalog # ALS10674

Specification

GPR44 / CRTH2 Antibody (Extracellular Domain) - Product Information

Application IHC-P, ICC Primary Accession O9Y5Y4

Reactivity Human, Monkey

Host
Clonality
Calculated MW
Dilution

Rabbit
Polyclonal
43kDa KDa
IHC-P~~N/A
ICC~~N/A

GPR44 / CRTH2 Antibody (Extracellular Domain) - Additional Information

Gene ID 11251

Other Names

Prostaglandin D2 receptor 2, Chemoattractant receptor-homologous molecule expressed on Th2 cells, G-protein coupled receptor 44, CD294, PTGDR2, CRTH2, DL1R, GPR44

Target/Specificity

Human GPR44 / CRTH2. BLAST analysis of the peptide immunogen showed no homology with other human proteins.

Reconstitution & Storage

Long term: -70°C; Short term: +4°C

Precautions

GPR44 / CRTH2 Antibody (Extracellular Domain) is for research use only and not for use in diagnostic or therapeutic procedures.

GPR44 / CRTH2 Antibody (Extracellular Domain) - Protein Information

Name PTGDR2

Synonyms CRTH2, DL1R, GPR44

Function

Receptor for prostaglandin D2 (PGD2). Coupled to the G(i)- protein. Receptor activation may result in pertussis toxin-sensitive decreases in cAMP levels and Ca(2+) mobilization. PI3K signaling is also implicated in mediating PTGDR2 effects. PGD2 induced receptor internalization. CRTH2 internalization can be regulated by diverse kinases such as, PKC, PKA, GRK2, GPRK5/GRK5 and GRK6. Receptor activation is responsible, at least in part, in immune regulation and allergic/inflammation responses.

Cellular Location

Cell membrane; Multi-pass membrane protein. Note=Internalized receptors colocalized with RAB11A.

Tissue Location

Widespread expression. High expression in stomach, small intestine, heart and thymus. Intermediate expression in colon, spinal cord and peripheral blood and low expression in brain, skeletal muscle and spleen. Expressed also on Th2- and Tc2- type cells, eosinophils and basophils.

Volume

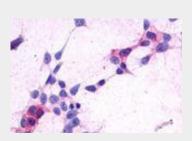

50 μl

GPR44 / CRTH2 Antibody (Extracellular Domain) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

GPR44 / CRTH2 Antibody (Extracellular Domain) - Background

Receptor for prostaglandin D2 (PGD2). Coupled to the G(i)-protein. Receptor activation may result in pertussis toxin- sensitive decreases in cAMP levels and Ca(2+) mobilization. PI3K signaling is also implicated in mediating PTGDR2 effects. PGD2 induced receptor internalization. CRTH2 internalization can be regulated by diverse kinases such as, PKC, PKA, ADRBK1/GRK2, GPRK5/GRK5 and GRK6. Receptor activation is responsible, at least in part, in immune regulation and allergic/inflammation responses.
