BRAP2 / IMP Antibody (N-Terminus) - Protein Information**Name** BRAP ([HGNC:1099](#))**Synonyms** RNF52**Function**

Negatively regulates MAP kinase activation by limiting the formation of Raf/MEK complexes probably by inactivation of the KSR1 scaffold protein. Also acts as a Ras responsive E3 ubiquitin ligase that, on activation of Ras, is modified by auto-polyubiquitination resulting in the release of inhibition of Raf/MEK complex formation. May also act as a cytoplasmic retention protein with a role in regulating nuclear transport.

Cellular Location

Cytoplasm.

Tissue Location

Expressed in breast epithelial cell lines.
