

### YY1 Antibody (clone 4A5)

Mouse Monoclonal Antibody Catalog # ALS14169

#### **Specification**

#### YY1 Antibody (clone 4A5) - Product Information

Application WB, IF, IHC
Primary Accession P25490
Reactivity Human
Host Mouse
Clonality Monoclonal
Calculated MW 45kDa KDa

### YY1 Antibody (clone 4A5) - Additional Information

#### **Gene ID 7528**

#### **Other Names**

Transcriptional repressor protein YY1, Delta transcription factor, INO80 complex subunit S, NF-E1, Yin and yang 1, YY-1, YY1, INO80S

#### Target/Specificity

Human YY1

#### **Reconstitution & Storage**

Short term 4°C, long term aliquot and store at -20°C, avoid freeze thaw cycles.

#### **Precautions**

YY1 Antibody (clone 4A5) is for research use only and not for use in diagnostic or therapeutic procedures.

### YY1 Antibody (clone 4A5) - Protein Information

# Name YY1

#### Synonyms INO80S

#### **Function**

Multifunctional transcription factor that exhibits positive and negative control on a large number of cellular and viral genes by binding to sites overlapping the transcription start site (PubMed:<a href="http://www.uniprot.org/citations/15329343" target="\_blank">15329343</a>, PubMed:<a href="http://www.uniprot.org/citations/17721549" target="\_blank">17721549</a>, PubMed:<a href="http://www.uniprot.org/citations/24326773" target="\_blank">24326773</a>, PubMed:<a href="http://www.uniprot.org/citations/25787250" target="\_blank">25787250</a>). Binds to the consensus sequence 5'-CCGCCATNTT-3'; some genes have been shown to contain a longer binding motif allowing enhanced binding; the initial CG dinucleotide can be methylated greatly reducing the binding affinity (PubMed:<a href="http://www.uniprot.org/citations/15329343" target=" blank">15329343</a>, PubMed:<a href="http://www.uniprot.org/citations/17721549"

target=" blank">17721549</a>, PubMed:<a href="http://www.uniprot.org/citations/24326773" target="blank">24326773</a>, PubMed:<a href="http://www.uniprot.org/citations/25787250" target="blank">25787250</a>). The effect on transcription regulation is depending upon the context in which it binds and diverse mechanisms of action include direct activation or repression, indirect activation or repression via cofactor recruitment, or activation or repression by disruption of binding sites or conformational DNA changes (PubMed: <a href="http://www.uniprot.org/citations/15329343" target=" blank">15329343</a>, PubMed:<a href="http://www.uniprot.org/citations/17721549" target="blank">17721549</a>, PubMed:<a href="http://www.uniprot.org/citations/24326773" target="blank">24326773</a>, PubMed:<a href="http://www.uniprot.org/citations/25787250" target="\_blank">25787250</a>). Its activity is regulated by transcription factors and cytoplasmic proteins that have been shown to abrogate or completely inhibit YY1- mediated activation or repression (PubMed: <a href="http://www.uniprot.org/citations/15329343" target=" blank">15329343</a>, PubMed:<a href="http://www.uniprot.org/citations/17721549" target="blank">17721549</a>, PubMed:<a href="http://www.uniprot.org/citations/24326773" target="blank">24326773</a>, PubMed:<a href="http://www.uniprot.org/citations/25787250" target="blank">25787250</a>). For example, it acts as a repressor in absence of adenovirus E1A protein but as an activator in its presence (PubMed:<a href="http://www.uniprot.org/citations/1655281" target="\_blank">1655281</a>). Acts synergistically with the SMAD1 and SMAD4 in bone morphogenetic protein (BMP)-mediated cardiac-specific gene expression (PubMed: <a href="http://www.uniprot.org/citations/15329343" target=" blank">15329343</a>). Binds to SMAD binding elements (SBEs) (5'-GTCT/AGAC-3') within BMP response element (BMPRE) of cardiac activating regions (PubMed:<a href="http://www.uniprot.org/citations/15329343" target="blank">15329343</a>). May play an important role in development and differentiation. Proposed to recruit the PRC2/EED-EZH2 complex to target genes that are transcriptional repressed (PubMed: <a href="http://www.uniprot.org/citations/11158321" target=" blank">11158321</a>). Involved in DNA repair (PubMed:<a href="http://www.uniprot.org/citations/18026119" target=" blank">18026119</a>, PubMed:<a href="http://www.uniprot.org/citations/28575647" target=" blank">28575647</a>). In vitro, binds to DNA recombination intermediate structures (Holliday junctions). Plays a role in regulating enhancer activation (PubMed: <a href="http://www.uniprot.org/citations/28575647" target=" blank">28575647</a>).

# YY1 Antibody (clone 4A5) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- <u>Immunofluorescence</u>
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture
