

PLG / Plasmin / Plasminogen Antibody

Sheep Polyclonal Antibody Catalog # ALS16803

Specification

PLG / Plasmin / Plasminogen Antibody - Product Information

Application IHC
Primary Accession P00747
Other Accession 5340

Reactivity Human, Mouse, Rat

Host Sheep Clonality Polyclonal Calculated MW 90569

PLG / Plasmin / Plasminogen Antibody - Additional Information

Gene ID 5340

Other Names

PLG, Plasmin, Plasminogen

Target/Specificity

Mouse PLG / Plasmin / Plasminogen

Reconstitution & Storage

50% glycerol/H2O (vol/vol). Store at -20°C.

Precautions

PLG / Plasmin / Plasminogen Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

PLG / Plasmin / Plasminogen Antibody - Protein Information

Name PLG

Function

Plasmin dissolves the fibrin of blood clots and acts as a proteolytic factor in a variety of other processes including embryonic development, tissue remodeling, tumor invasion, and inflammation. In ovulation, weakens the walls of the Graafian follicle. It activates the urokinase-type plasminogen activator, collagenases and several complement zymogens, such as C1 and C5. Cleavage of fibronectin and laminin leads to cell detachment and apoptosis. Also cleaves fibrin, thrombospondin and von Willebrand factor. Its role in tissue remodeling and tumor invasion may be modulated by CSPG4. Binds to cells.

Cellular Location

Secreted. Note=Locates to the cell surface where it is proteolytically cleaved to produce the active plasmin. Interaction with HRG tethers it to the cell surface

Tissue Location

Present in plasma and many other extracellular fluids. It is synthesized in the liver

Volume 50 µl

PLG / Plasmin / Plasminogen Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

PLG / Plasmin / Plasminogen Antibody - Images

Anti-PLG / Plasmin / Plasminogen antibody IHC staining of human liver.

PLG / Plasmin / Plasminogen Antibody - Background

Plasmin dissolves the fibrin of blood clots and acts as a proteolytic factor in a variety of other processes including embryonic development, tissue remodeling, tumor invasion, and inflammation. In ovulation, weakens the walls of the Graafian follicle. It activates the urokinase-type plasminogen activator, collagenases and several complement zymogens, such as C1 and C5. Cleavage of fibronectin and laminin leads to cell detachment and apoptosis. Also cleaves fibrin, thrombospondin and von Willebrand factor. Its role in tissue remodeling and tumor invasion may be modulated by CSPG4. Binds to cells.
