Anti-HIST3H3 Antibody - Protein Information

Name H3-4 (HGNC:4778)

Function

Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.

Cellular LocationNucleus. Chromosome.

Tissue Location

Expressed in testicular cells.
