

Catalog # AM1984b

THAP11 Antibody (Center) Mouse Monoclonal Antibody (Mab)

Specification

THAP11 Antibody (Center) - Product Information

Application Primary Accession Other Accession Reactivity Predicted Host Clonality Isotype Calculated MW Antigen Region WB,E <u>O96EK4</u> <u>A5PKF5</u>, <u>NP_065190.2</u> Human, Mouse Bovine Mouse Monoclonal IgM 34455 165-193

THAP11 Antibody (Center) - Additional Information

Gene ID 57215

Other Names THAP domain-containing protein 11, THAP11

Target/Specificity

This THAP11 antibody is generated from mice immunized with a KLH conjugated synthetic peptide between 165-193 amino acids from the Central region of human THAP11.

Dilution WB~~1:500~1000 E~~Use at an assay dependent concentration.

Format

Purified monoclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Euglobin precipitation followed by dialysis against PBS.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions THAP11 Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

THAP11 Antibody (Center) - Protein Information

Name THAP11

Function Transcription factor, which has both transcriptional activation and repression activities (PubMed:<u>31905202</u>). Also modulates chromatin accessibility (PubMed:<u>38361031</u>). In complex with HCFC1 and ZNF143, regulates the expression of several genes, including AP2S1, ESCO2, OPHN1, RBL1, UBXN8 and ZNF32 (PubMed:<u>26416877</u>). May regulate the expression of genes that encode both cytoplasmic and mitochondrial ribosomal proteins (By similarity). Required for normal mitochondrial development and function. Regulates mitochondrial gene expression, including that of components of the electron transport chain (By similarity). Involved in the maintainance of pluripotency in early embryonic cells, possibly through its action on mitochondrial maturation which is required to meet high energy demands of these cells (By similarity). Required for early development of retina, preventing premature exit of retinal progenitor cells from the cell cycle. This effect may also be mediated by its action on mitochondria (By similarity). Through the regulation of MMACHC gene expression, controls cobalamin metabolism (PubMed:<u>28449119</u>, PubMed:<u>31905202</u>). Required for normal brain development and neural precursor differentiation (By similarity). Involved in cell growth (PubMed:<u>31905202</u>).

Cellular Location

Nucleus. Cytoplasm Note=In oocytes, detected in the ooplasm, without evidence of its presence in the nucleus (By similarity). Found in the nucleus of undifferentiated embryonic stem cells (PubMed:18585351). Evenly distributed between nucleus and cytoplasm in skin fibroblasts (PubMed:37148549). {ECO:0000250|UniProtKB:Q9JJD0, ECO:0000269|PubMed:18585351, ECO:0000269|PubMed:37148549}

Tissue Location Expressed in skin fibroblasts.

THAP11 Antibody (Center) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- <u>Blocking Peptides</u>
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

THAP11 Antibody (Center) - Images

THAP11 Antibody (Center) (Cat. #AM1984b) western blot analysis in HepG2 cell line lysates (35µg/lane).This demonstrates the THAP11 antibody detected the THAP11 protein (arrow).

THAP11 Antibody (Center) (Cat. #AM1984b) western blot analysis in mouse NIH-3T3 cell line lysates (35µg/lane). This demonstrates the THAP11 antibody detected the THAP11 protein (arrow).

THAP11 Antibody (Center) - Background

The protein encoded by this gene contains a THAP domain, which is a conserved DNA-binding domain that has striking similarity to the site-specific DNA-binding domain (DBD) of Drosophila P element transposases.
