

HMG2 Antibody (Ascites)
Mouse Monoclonal Antibody (Mab)
Catalog # AM2077a**Specification**

HMG2 Antibody (Ascites) - Product Information

Application	WB,E
Primary Accession	P52926
Other Accession	P52927 , NP_003474.1
Reactivity	Human
Predicted	Mouse
Host	Mouse
Clonality	Monoclonal
Isotype	IgG2b
Calculated MW	11832
Antigen Region	64-92

HMG2 Antibody (Ascites) - Additional Information**Gene ID** 8091**Other Names**

High mobility group protein HMGI-C, High mobility group AT-hook protein 2, HMGA2, HMGIC

Target/Specificity

This HMG2 antibody is generated from mice immunized with a KLH conjugated synthetic peptide between 64-92 amino acids from human HMG2.

Dilution

WB~~1:500~8000

E~~Use at an assay dependent concentration.

Format

Mouse monoclonal antibody supplied in crude ascites with 0.09% (W/V) sodium azide.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

HMG2 Antibody (Ascites) is for research use only and not for use in diagnostic or therapeutic procedures.

HMG2 Antibody (Ascites) - Protein Information**Name** HMGA2**Synonyms** HMGIC

Function Functions as a transcriptional regulator. Functions in cell cycle regulation through CCNA2. Plays an important role in chromosome condensation during the meiotic G2/M transition of spermatocytes. Plays a role in postnatal myogenesis, is involved in satellite cell activation (By similarity). Positively regulates IGF2 expression through PLAG1 and in a PLAG1-independent manner (PubMed:[28796236](#)).

Cellular Location

Nucleus.

HMG2 Antibody (Ascites) - Protocols

Provided below are standard protocols that you may find useful for product applications.

HMG2 Antibody (Ascites) - Images

HMG2 Antibody (Cat. #AM2077a) western blot analysis in HepG2 cell line lysates (35µg/lane). This demonstrates the HMG2 antibody detected the HMG2 protein (arrow).

HMG2 Antibody (Ascites) - Background

This gene encodes a protein that belongs to the non-histone chromosomal high mobility group (HMG) protein family. HMG proteins function as architectural factors and are essential components of the enhancosome. This protein contains structural DNA-binding domains and may act as a transcriptional regulating factor. Identification of the deletion, amplification, and rearrangement of this gene that are associated with myxoid liposarcoma suggests a role in adipogenesis and mesenchymal differentiation. A gene knock out study of the mouse counterpart demonstrated that this gene is involved in diet-induced obesity.

Alternate transcriptional splice variants, encoding different isoforms, have been characterized.
