

Phospho-Ser187 SNAP25 Antibody
Affinity purified rabbit polyclonal antibody
Catalog # AN1230

Specification

Phospho-Ser187 SNAP25 Antibody - Product Information

Application	FC, WB
Primary Accession	P60881
Reactivity	Rat
Predicted	Human, Mouse, Pig, Monkey, Zebrafish
Host	Rabbit
Clonality	polyclonal
Calculated MW	25 KDa

Phospho-Ser187 SNAP25 Antibody - Additional Information

Gene ID	25012
Gene Name	SNAP25
Other Names	
Synaptosomal-associated protein 25, SNAP-25, Super protein, SUP, Synaptosomal-associated 25 kDa protein, Snap25, Snap	

Target/Specificity

Synthetic phospho-peptide corresponding to amino acid residues surrounding Ser187 conjugated to KLH.

Dilution

FC~~1:500

WB~~ 1:1000

Format

Prepared from rabbit serum by affinity purification via sequential chromatography on phospho- and dephosphopeptide affinity columns.

Antibody Specificity

Specific for the ~25k SNAP25 protein phosphorylated at Ser187 in Western blots. Immunolabeling is completely blocked by blocked λ -Ptase.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Phospho-Ser187 SNAP25 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping

Blue Ice

Phospho-Ser187 SNAP25 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Phospho-Ser187 SNAP25 Antibody - Images

Flow cytometric analysis of U-87 MG cells using Park7 (DJ-1) Antibody(green, Cat#AN1230) compared to an isotype control of rabbit IgG(blue). AN1230 was diluted at 1:500 dilution. An Alexa Fluor® 488 goat anti-rabbit IgG at 1:400 dilution was used as the secondary antibody.

Western blot of rat hippocampal lysate showing specific immunolabeling of the ~25k SNAP25 phosphorylated at Ser187 (Control). Phosphospecificity is shown in the right lane where the signal is completely eliminated by treatment with lambda phosphatase (λ -Ptase, 400 units/100ul lysate for 30 min).

Phospho-Ser187 SNAP25 Antibody - Background

SNAP25 (Synaptosomal associated protein of 25 kDa) is a presynaptic plasma membrane protein that is widely distributed throughout the brain and involved in the regulation of neurotransmitter

release. Decreased levels of SNAP25 have been found in the brains of patients with Down Syndrome and Alzheimer's Disease (Greber et al., 1999). In addition, a significant reduction in the hippocampal expression of SNAP25 has also been found in patients with Schizophrenia (Fatemi et al., 2001). Increasing evidence suggests that SNAP-25 also modulates various ion channels, including voltage gated calcium channels (VGCCs) (Pozzi et al., 2008). Activation of PKC results in the phosphorylation of SNAP-25 on ser187 (Shu et al., 2008). Phosphorylation of SNAP25 on ser187 is believed to cause inhibition of VGCC (Pozzi et al., 2008). Since ser187 phosphorylation is transiently induced by neuronal activity, SNAP25 creates a negative feedback mechanism for controlling neuronal excitability (Pozzi et al., 2008).
