

Anti-Alpha II Spectrin Antibody

Our Anti-Alpha II Spectrin primary antibody from PhosphoSolutions is mouse monoclonal. It detects bo Catalog # AN1300

Specification

Anti-Alpha II Spectrin Antibody - Product Information

Application WB, IHC Primary Accession 013813

Reactivity Bovine, Chicken

Host Mouse Clonality Monoclonal

Isotype IgG1
Calculated MW 284539

Anti-Alpha II Spectrin Antibody - Additional Information

Gene ID 6709

Other Names

(ALPHA)II-SPECTRIN antibody, Alpha-II spectrin antibody, brain antibody, EIEE5 antibody, 7738 antibody, FLJ44613 antibody, Fodrin antibody, Fodrin alpha chain antibody, Fodrin, alpha antibody, NEAS antibody, Non erythrocytic spectrin alpha antibody, non-erythroid alpha chain antibody, SPECA antibody, Spectrin alpha chain antibody, Spectrin alpha non erythrocytic 1 antibody, Spectrin antibody, Spectrin non erythroid alpha chain antibody, Spectrin, alpha, non-erythrocytic 1 (alpha-fodrin) antibody, Spectrin, nonerythroid, alpha subunit antibody, Spna2 antibody, SPTA 2 antibody, SPTA2 antibody, SPTA2_HUMAN antibody, SPTAN 1 antibody, SPTAN1 antibody

Target/Specificity

The spectrin family of cytoskeletal proteins is comprised of 2 alpha genes ($\alpha 1$ and $\alpha 2$) and five beta genes ($\beta 1$ - $\beta 5$). Spectrins have been shown to function as scaffolding proteins in mechanical support of the plasma membrane as well as bind other membrane proteins and lipids (Bennett and Baines 2001). Defects in spectrin genes have been linked to some forms of hereditary spherocytosis, a type of auto-hemolytic anemia which is characterized by spherical red blood cells that are more prone to lysis (Eber and Lux 2004).

Dilution

WB~~1:1000 IHC~~1:100~500

Format

Protein G Purified

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Anti-Alpha II Spectrin Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping Blue Ice

Anti-Alpha II Spectrin Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- <u>Immunofluorescence</u>
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Anti-Alpha II Spectrin Antibody - Images

Immunofluorescence of a section of rat cerebellum selectively labeling the submembraneous cytoskeleton on neurons and cell bodies and dendrites of Purkinje cells with alpha-II-spectrin (cat. 98-A2SM, 1:2000, green) and labeling the processes of Bergmann glia and astrocytes with anti-GFAP (cat. 621-GFAP, 1:5000, red).

Western blot of rat hippocampal lysate showing specific immunolabeling of the \sim 240 kDa alpha II spectrin protein.

Immunofluorescence of cultured neurons and glia cells showing specific axonal and dendritic labeling with anti-alpha-II-spectrin (cat. 98-A2SM, 1:500, green), and nuclear staining with DAPI (blue).

Anti-Alpha II Spectrin Antibody - Background

The spectrin family of cytoskeletal proteins is comprised of 2 alpha genes ($\alpha 1$ and $\alpha 2$) and five beta genes ($\beta 1$ - $\beta 5$). Spectrins have been shown to function as scaffolding proteins in mechanical support of the plasma membrane as well as bind other membrane proteins and lipids (Bennett and Baines 2001). Defects in spectrin genes have been linked to some forms of hereditary spherocytosis, a type of auto-hemolytic anemia which is characterized by spherical red blood cells that are more prone to lysis (Eber and Lux 2004).
