

**Anti-GABAB Receptor (Ser923), R1-Subunit Antibody**  
Our Anti-GABAB Receptor (Ser923), R1-Subunit rabbit polyclonal phosphospecific primary antibody from  
Catalog # AN1407

## Specification

### Anti-GABAB Receptor (Ser923), R1-Subunit Antibody - Product Information

Primary Accession	<a href="#">Q9Z0U4</a>
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	108204

### Anti-GABAB Receptor (Ser923), R1-Subunit Antibody - Additional Information

Gene ID **81657**

**Other Names**

dJ271M21.1.1 antibody, dJ271M21.1.2 antibody, FLJ92613 antibody, GABA-B receptor 1 antibody, GABA-B-R1 antibody, GABA-BR1 antibody, GABAB R1 antibody, GABAB subunit 1c antibody, GABABR1 antibody, GABBR1 3 antibody, GABBR1 antibody, GABR1\_HUMAN antibody, Gamma aminobutyric acid (GABA) B receptor 1 antibody, Gamma-aminobutyric acid type B receptor subunit 1 antibody, Gb1 antibody, GPRC3A antibody, Seven transmembrane helix receptor antibody

**Target/Specificity**

Gamma-aminobutyric acid (GABA) is the primary inhibitory neurotransmitter in the central nervous system. There are two major classes of GABA receptors: the GABA-A and the GABA-B subtype of receptors. GABA-B receptors are heterodimeric G protein-coupled receptors that mediate slow synaptic inhibition in the central nervous system. Phosphorylation enhances GABA-B receptor effector coupling (Couve et al., 2004). Phosphorylation of Ser-923 is thought to be important in the regulation of GABA-B receptor function.

**Format**

Antigen Affinity Purified from Pooled Serum

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

Anti-GABAB Receptor (Ser923), R1-Subunit Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**Shipping**

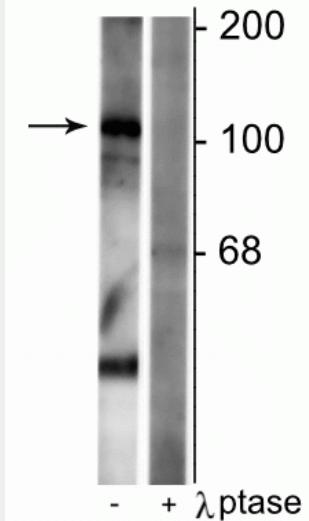

Blue Ice

### Anti-GABAB Receptor (Ser923), R1-Subunit Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

#### Anti-GABAB Receptor (Ser923), R1-Subunit Antibody - Images

Western blot of rat synaptic membrane lysate showing specific immunolabeling of the ~102 kDa GABAB R1 protein phosphorylated at Ser923 in the first lane (-). Phosphospecificity is shown in the second lane (+) where immunolabeling is completely eliminated by blot treatment with lambda phosphatase ( $\lambda$ -Ptase, 1200 units for 30 min).

#### Anti-GABAB Receptor (Ser923), R1-Subunit Antibody - Background

Gamma-aminobutyric acid (GABA) is the primary inhibitory neurotransmitter in the central nervous system. There are two major classes of GABA receptors: the GABA-A and the GABA-B subtype of receptors. GABA-B receptors are heterodimeric G protein-coupled receptors that mediate slow synaptic inhibition in the central nervous system. Phosphorylation enhances GABA-B receptor effector coupling (Couve et al., 2004). Phosphorylation of Ser-923 is thought to be important in the regulation of GABA-B receptor function.
