

#### **Anti-Vimentin Antibody**

Our Anti-Vimentin primary antibody from PhosphoSolutions is mouse monoclonal. It detects human Vimen
Catalog # AN1606

# **Specification**

# **Anti-Vimentin Antibody - Product Information**

Application WB
Primary Accession P08670
Host Mouse
Clonality Monoclonal
Isotype IgM

Calculated MW 53652

### **Anti-Vimentin Antibody - Additional Information**

Gene ID **7431** 

**Other Names** 

CTRCT30 antibody, Epididymis luminal protein 113 antibody, FLJ36605 antibody, HEL113 antibody, VIM antibody, VIME HUMAN antibody, Vimentin antibody

#### Target/Specificity

Vimentin is the major protein subunit of the 10 nm or intermediate filaments (IFs) found in many kinds of mesenchymal and epithelial cells as well as developing neuronal and astrocytic precursor cells in the CNS. Vimentin is thought to be critically involved in lymphocyte adhesion and transmigration (Nieminen M et al. 2006). Copolymers are frequently formed between vimentin and other IFs, such as GFAP (in many kinds of astrocytes), desmin (in muscle cells) and neurofilament proteins (in developing neurons). Antibodies to vimentin are useful in studies of stem cells and generally to reveal the filamentous cytoskeleton. Recent studies suggest that vimentin affects prostate cancer cells motility and invasiveness (Zhao et al. 2008).

## **Dilution**

WB~~1:1000

### **Format**

Protein L Purified

### **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

#### **Precautions**

Anti-Vimentin Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

## **Shipping**

Blue Ice

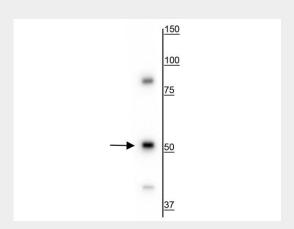

# **Anti-Vimentin Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

### **Anti-Vimentin Antibody - Images**

Western blot of HeLa cell lysate showing specific immunolabeling of the ~50 kDa vimentin protein.

#### **Anti-Vimentin Antibody - Background**

Vimentin is the major protein subunit of the 10 nm or intermediate filaments (IFs) found in many kinds of mesenchymal and epithelial cells as well as developing neuronal and astrocytic precursor cells in the CNS. Vimentin is thought to be critically involved in lymphocyte adhesion and transmigration (Nieminen M et al. 2006). Copolymers are frequently formed between vimentin and other IFs, such as GFAP (in many kinds of astrocytes), desmin (in muscle cells) and neurofilament proteins (in developing neurons). Antibodies to vimentin are useful in studies of stem cells and generally to reveal the filamentous cytoskeleton. Recent studies suggest that vimentin affects prostate cancer cells motility and invasiveness (Zhao et al. 2008).
