

Anti-δ1-Catenin (central region) Antibody

Catalog # AN1683

Specification

Anti-δ1-Catenin (central region) Antibody - Product Information

Application WB, IHC
Primary Accession O60716
Reactivity Bovine
Host Mouse

Clonality Mouse Monoclonal

Isotype IgG1
Calculated MW 108170

Anti-δ1-Catenin (central region) Antibody - Additional Information

Gene ID 1500 Other Names

pp120 Src substrate, p120

Target/Specificity

Catenins have emerged as molecular sensors that integrate cell-cell junctions and cytoskeletal dynamics with signaling pathways that control morphogenesis and cell to cell communication. $\delta 1$ -Catenin (p120 catenin) is a catenin family member which contains an N-terminal coiled-coil domain, a regulatory domain containing multiple phosphorylation sites, and a central Armadillo repeat domain. $\delta 1$ -Catenin regulates E-cadherin turnover, and has both positive and negative effects on cadherin-mediated adhesion. Actin dynamics are also regulated by $\delta 1$ -Catenin, which can modulate RhoA, Rac and cdc42 activity. $\delta 1$ -Catenin is phosphorylated at multiple tyrosine, serine and threonine sites both in vitro and in vivo. High levels of $\delta 1$ -Catenin phosphorylated at Tyr-228 are commonly seen in several carcinoma cell lines and after EGFR activation. Many other tyrosine sites are also phosphorylated in the N-terminal region including Tyr-96, Tyr-112, Tyr-280, and Tyr-302. In addition, Thr-310 and Thr-916 are constituitively phosphorylated in many cell types, however this phosphorylation may occur only in $\delta 1$ -Catenin associated with the plasma membrane.

Dilution

WB~~1:1000 IHC~~1:100~500

Format

Protein A Purified

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

Anti- δ 1-Catenin (central region) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Shipping

Blue Ice

Anti-δ1-Catenin (central region) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

Anti-δ1-Catenin (central region) Antibody - Images

Western blot analysis of $\delta 1$ -Catenin phosphorylation in A431 cells stimulated with calyculin A (100 nM) for 30 min. (lanes 1 & 3) then the blot was treated with lambda phosphatase (lanes 2 & 4). The blots were probed with either mouse monoclonal anti- $\delta 1$ -Catenin (a.a. 275-285) (lanes 1 & 2) or rabbit polyclonal anti- $\delta 1$ -Catenin (Thr-916) (lanes 3 & 4).

Immunocytochemical labeling of $\delta 1$ -Catenin in untreated (Top) or pervanadate-treated (bottom) A431 cells. The cells were labeled with mouse monoclonal $\delta 1$ -Catenin (a.a. 275-285), $\delta 1$ -Catenin (Tyr-228), $\delta 1$ -Catenin (Tyr-280), or $\delta 1$ -Catenin (Tyr-302) antibodies. The antibodies were detected

using donkey anti-mouse secondary antibodies conjugated to Cy3.

Anti-δ1-Catenin (central region) Antibody - Background

Catenins have emerged as molecular sensors that integrate cell-cell junctions and cytoskeletal dynamics with signaling pathways that control morphogenesis and cell to cell communication. δ1-Catenin (p120 catenin) is a catenin family member which contains an N-terminal coiled-coil domain, a regulatory domain containing multiple phosphorylation sites, and a central Armadillo repeat domain. δ 1-Catenin regulates E-cadherin turnover, and has both positive and negative effects on cadherin-mediated adhesion. Actin dynamics are also regulated by $\delta 1$ -Catenin, which can modulate RhoA, Rac and cdc42 activity. δ1-Catenin is phosphorylated at multiple tyrosine, serine and threonine sites both in vitro and in vivo. High levels of δ1-Catenin phosphorylated at Tyr-228 are commonly seen in several carcinoma cell lines and after EGFR activation. Many other tyrosine sites are also phosphorylated in the N-terminal region including Tyr-96, Tyr-112, Tyr-280, and Tyr-302. In addition, Thr-310 and Thr-916 are constituitively phosphorylated in many cell types, however this phosphorylation may occur only in δ 1-Catenin associated with the plasma membrane.
