

Anti-Integrin β 1 (Extracellular region) Antibody
Catalog # AN1822**Specification****Anti-Integrin β 1 (Extracellular region) Antibody - Product Information**

Application	WB, IHC
Primary Accession	P05556
Host	Mouse
Clonality	Mouse Monoclonal
Isotype	IgG2a
Calculated MW	88415

Anti-Integrin β 1 (Extracellular region) Antibody - Additional Information**Gene ID** 3688**Other Names**

Integrin beta-1, Fibronectin receptor subunit beta, Glycoprotein IIa, GPIIA, VLA-4 subunit beta, CD29, TGB1, FNRB, MDF2, MSK12, ITGB1

Target/Specificity

Integrins are cell adhesion molecules that can mediate bidirectional transfer of signals across the plasma membrane. The cytoplasmic domains of integrin family members interact with components of the signal transduction apparatus within cells. Integrin receptors contain noncovalently associated α and β subunits that consist of a large extracellular region (the ligand-binding domain), a short transmembrane region, and a cytoplasmic domain of varying length. In mammals, at least 17 α subunits and 8 β subunits have been identified and these proteins can heterodimerize to form at least 22 different receptors. The integrin β 2 subunit associates with integrin α L to form a receptor for ICAM family members. Integrin β 2/ α L is involved in a variety of immune phenomena including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes and monocytes.

Dilution

WB~~1:1000

IHC~~1:100~500

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

PrecautionsAnti-Integrin β 1 (Extracellular region) Antibody is for research use only and not for use in diagnostic or therapeutic procedures.**Shipping**

Blue Ice

Anti-Integrin β 1 (Extracellular region) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

Anti-Integrin $\beta 1$ (Extracellular region) Antibody - Images

Western blot analysis of native cell lysates from human NCI-H446 lung cancer cells (lane 1), LNCaP prostate cancer cells (lane 2), and MCF7 breast cancer cells (lane 3). The blots were probed with mouse monoclonal anti-Integrin $\beta 1$ (IM0411) at 1:1000 dilution.

Immunocytochemical labeling of Integrin $\beta 1$ in aldehyde fixed and NP40 permeabilized human NCI-H1915 lung carcinoma cells. The cells were labeled with mouse monoclonal anti-Integrin $\beta 1$ (IM0411). The antibody was detected using goat anti-mouse Ig:DyLight® 594.

Anti-Integrin $\beta 1$ (Extracellular region) Antibody - Background

Integrins are cell adhesion molecules that can mediate bidirectional transfer of signals across the plasma membrane. The cytoplasmic domains of integrin family members interact with components of the signal transduction apparatus within cells. Integrin receptors contain noncovalently

associated α and β subunits that consist of a large extracellular region (the ligand-binding domain), a short transmembrane region, and a cytoplasmic domain of varying length. In mammals, at least 17 α subunits and 8 β subunits have been identified and these proteins can heterodimerize to form at least 22 different receptors. The integrin $\beta 2$ subunit associates with integrin αL to form a receptor for ICAM family members. Integrin $\beta 2/\alpha L$ is involved in a variety of immune phenomena including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes and monocytes.
