Description

Mesp1 (mesoderm posterior 1) is a basic helix-loop-helix-type transcription factor, which along with its related proteins, has an essential role in both segmentation and rostro-caudal patterning of somites in the anterior pre-somitic mesoderm. Mesp1 is expressed in many of the precursors of the cardiovascular system and is known to play a role in the process of cardiac morphogenesis.

Immunogen

Purified recombinant fragment of human MESP1 expressed in E. Coli.

Formulation

Ascitic fluid containing 0.03% sodium azide.
