

**GPNCMB Antibody**  
**Purified Mouse Monoclonal Antibody**  
**Catalog # AO1823a****Specification****GPNCMB Antibody - Product Information**

Application	WB, IHC, E
Primary Accession	<a href="#">Q14956</a>
Reactivity	Human
Host	Mouse
Clonality	Monoclonal
Isotype	IgG1
Calculated MW	64kDa KDa

**Description**

The protein encoded by this gene is a type I transmembrane glycoprotein which shows homology to the pMEL17 precursor, a melanocyte-specific protein. GPNCMB shows expression in the lowly metastatic human melanoma cell lines and xenografts but does not show expression in the highly metastatic cell lines. GPNCMB may be involved in growth delay and reduction of metastatic potential. Two transcript variants encoding different isoforms have been found for this gene.

**Immunogen**

Purified recombinant fragment of human GPNCMB (AA: 31-260) expressed in E. Coli.

**Formulation**

Purified antibody in PBS with 0.05% sodium azide

**GPNCMB Antibody - Additional Information**

**Gene ID** 10457

**Other Names**

Transmembrane glycoprotein NMB, Transmembrane glycoprotein HGFIN, GPNCMB, HGFIN, NMB

**Dilution**

WB~~1/500 - 1/2000

IHC~~1/200 - 1/1000

E~~1/10000

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions**

GPNCMB Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

**GPNCMB Antibody - Protein Information**

**Name** GPNMB

**Synonyms** HGFIN {ECO:0000303|PubMed:12609765}, NMB

**Function**

Could be a melanogenic enzyme.

**Cellular Location**

Cell membrane; Single-pass type I membrane protein Melanosome membrane; Single-pass type I membrane protein. Early endosome membrane; Single-pass type I membrane protein.  
Note=Identified by mass spectrometry in melanosome fractions from stage I to stage IV

**Tissue Location**

Widely expressed, but very low expression, if any, in the brain (PubMed:12609765, PubMed:16609006). Expressed in the epidermis with higher levels in melanocytes compared with keratinocytes and Langerhans cells (at protein level) (PubMed:29336782). Expressed in peripheral blood, but not bone marrow mononuclear cells (PubMed:12609765). Expressed in tissue macrophages, including liver Kuppfer cells and lung alveolar macrophages, in podocytes and in some cells of the ciliary body of the eye (at protein level) (PubMed:16489096). May be overexpressed in various cancers, including melanoma and glioblastoma multiforme (PubMed:16489096, PubMed:16609006, PubMed:7814155).

**GPNMB Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.
