FX4L1 Antibody (N-term) (Cat. #AP11337a) western blot analysis in NCI-H460 cell line lysates (35ug/lane). This demonstrates the FX4L1 antibody detected the FX4L1 protein (arrow).

FX4L1 Antibody (N-term) (Cat. #AP11337a) flow cytometric analysis of NCI-H460 cells (right histogram) compared to a negative control cell (left histogram). FITC-conjugated goat-anti-rabbit secondary antibodies were used for the analysis.

FX4L1 Antibody (N-term) - Background

This gene is a member of the forkhead/winged-helix (FOX) family of transcription factors with highly conserved FOX DNA-binding domains. Members of the FOX family of transcription factors are regulators of embryogenesis and may play a role in human cancer. This gene lies in a region of chromosome 2 that surrounds the site where two ancestral chromosomes fused to form human chromosome 2. This region is duplicated elsewhere in the human genome, primarily in subtelomeric and pericentromeric locations, thus multiple copies of this gene have been found.
