PPEF1 Antibody (Center) - Images

Western blot analysis of PPEF1 (arrow) using rabbit polyclonal PPEF1 Antibody (Center) (Cat. #AP14395c). 293 cell lysates (2 ug/lane) either nontransfected (Lane 1) or transiently transfected (Lane 2) with the PPEF1 gene.

PPEF1 Antibody (Center) (Cat. #AP14395c) western blot analysis in CEM cell line lysates (35ug/lane). This demonstrates the PPEF1 antibody detected the PPEF1 protein (arrow).

PPEF1 Antibody (Center) - Background

This gene encodes a member of the serine/threonine protein phosphatase with EF-hand motif family. The protein contains a protein phosphatase catalytic domain, and at least two EF-hand calcium-binding motifs in its C terminus. Although its substrate(s) is unknown, the encoded protein has been suggested to play a role in specific sensory neuron function and/or development. This gene shares high sequence similarity with the *Drosophila* retinal degeneration C (*rdgC*) gene. Several alternatively spliced transcript variants, each encoding a distinct isoform, have been described.
