

## **CCNG2 Antibody (Center)**

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP16698c

## **Specification**

## **CCNG2 Antibody (Center) - Product Information**

WB,E Application **Primary Accession** 016589 NP 004345.1 Other Accession Reactivity Human Host **Rabbit** Clonality **Polyclonal** Isotype Rabbit IgG Calculated MW 38866 Antigen Region 215-243

## **CCNG2 Antibody (Center) - Additional Information**

#### Gene ID 901

#### **Other Names**

Cyclin-G2, CCNG2

#### Target/Specificity

This CCNG2 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 215-243 amino acids from the Central region of human CCNG2.

# **Dilution**

WB~~1:1000

E~~Use at an assay dependent concentration.

### **Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

### Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

## **Precautions**

CCNG2 Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

## **CCNG2 Antibody (Center) - Protein Information**

### Name CCNG2

**Function** May play a role in growth regulation and in negative regulation of cell cycle progression.

Cellular Location Cytoplasm.

#### **Tissue Location**

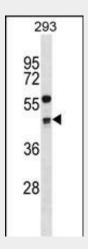

High levels in cerebellum, thymus, spleen and prostate. Low levels in skeletal muscle

## **CCNG2 Antibody (Center) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

## CCNG2 Antibody (Center) - Images

CCNG2 Antibody (Center) (Cat. #AP16698c) western blot analysis in 293 cell line lysates (35ug/lane). This demonstrates the CCNG2 antibody detected the CCNG2 protein (arrow).

## **CCNG2 Antibody (Center) - Background**

The eukaryotic cell cycle is governed by cyclin-dependent protein kinases (CDKs) whose activities are regulated by cyclins and CDK inhibitors. The 8 species of cyclins reported in mammals, cyclins A through H, share a conserved amino acid sequence of about 90 residues called the cyclin box. The amino acid sequence of cyclin G is well conserved among mammals. The nucleotide sequence of cyclin G1 and cyclin G2 are 53% identical. Unlike cyclin G1, cyclin G2 contains a C-terminal PEST protein destabilization motif, suggesting that cyclin G2 expression is tightly regulated through the cell cycle.
