

ITPRIPL1 Antibody (N-term)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP16909a**Specification**

ITPRIPL1 Antibody (N-term) - Product Information

Application	WB,E
Primary Accession	Q6GPH6
Other Accession	NP_848590.3 , NP_001008949.1
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	63395
Antigen Region	43-71

ITPRIPL1 Antibody (N-term) - Additional Information**Gene ID** 150771**Other Names**

Inositol 1, 5-trisphosphate receptor-interacting protein-like 1, ITPRIPL1, KIAA1754L

Target/Specificity

This ITPRIPL1 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 43-71 amino acids from the N-terminal region of human ITPRIPL1.

Dilution

WB~~1:1000

E~~Use at an assay dependent concentration.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

ITPRIPL1 Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

ITPRIPL1 Antibody (N-term) - Protein Information**Name** ITPRIPL1 ([HGNC:29371](#))**Synonyms** KIAA1754L

Function Functions as a ligand of CD3E, inhibiting TCR-CD3 complex signaling to regulate T cell activation. Induces stable CD3E-NCK1 binding, thereby preventing the CD3E-ZAP70 interaction and subsequently inhibiting the activation of the downstream ERK-NFkB signaling cascade and calcium influx.

Cellular Location

Cell membrane; Single-pass type I membrane protein

Tissue Location

Expressed in testis and tumoral cells.

ITPRIPL1 Antibody (N-term) - Protocols

Provided below are standard protocols that you may find useful for product applications.

ITPRIPL1 Antibody (N-term) - Background

ITPRIPL1 (inositol 1,4,5-triphosphate receptor-interacting protein-like 1), also known as KIAA1754L, is a 555 amino acid protein belonging to the ITPRIP family. ITPRIPL1 is a single-pass type I membrane protein expressed as two isoforms produced by alternative splicing events. The gene that encodes ITPRIPL1 maps to human chromosome 2, the second largest human chromosome, consisting of 237 million bases encoding over 1,400 genes and making up approximately 8% of the human genome. A number of genetic diseases are linked to genes on chromosome 2. Harlequin

ichthyosis, a rare and morbid skin deformity, is associated with mutations in the ABCA12 gene. The lipid metabolic disorder sitosterolemia is associated with ABCG5 and ABCG8. An extremely rare recessive genetic disorder, Alstr m syndrome is due to mutations in the ALMS1 gene. It has been hypothesized that human chromosome 2 is the result of an ancient fusion of two ancestral chromosome due to its composition of a vestigial second centromere and vestigial telomeres.
