

UVRAG Antibody (L133)
Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP1850d**Specification**

UVRAG Antibody (L133) - Product Information

Application	IHC-P, WB, IF,E
Primary Accession	Q9P2Y5
Reactivity	Human, Mouse
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	78151
Antigen Region	120-152

UVRAG Antibody (L133) - Additional Information**Gene ID** 7405**Other Names**

UV radiation resistance-associated gene protein, p63, UVRAG

Target/Specificity

This UVRAG antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 120-152 amino acids from human UVRAG.

Dilution

IHC-P~~1:10~50

WB~~1:1000

IF~~Tested

E~~Use at an assay dependent concentration.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

UVRAG Antibody (L133) is for research use only and not for use in diagnostic or therapeutic procedures.

UVRAG Antibody (L133) - Protein Information**Name** UVRAG

Function Versatile protein that is involved in regulation of different cellular pathways implicated in membrane trafficking. Involved in regulation of the COPI-dependent retrograde transport from Golgi and the endoplasmic reticulum by associating with the NRZ complex; the function is dependent on its binding to phosphatidylinositol 3- phosphate (PtdIns(3)P) (PubMed:[16799551](#), PubMed:[18552835](#), PubMed:[20643123](#), PubMed:[24056303](#), PubMed:[28306502](#)). During autophagy acts as a regulatory subunit of the alternative PI3K complex II (PI3KC3-C2) that mediates formation of phosphatidylinositol 3-phosphate and is believed to be involved in maturation of autophagosomes and endocytosis. Activates lipid kinase activity of PIK3C3 (PubMed:[16799551](#), PubMed:[20643123](#), PubMed:[24056303](#), PubMed:[28306502](#)). Involved in the regulation of degradative endocytic trafficking and cytokinesis, and in regulation of ATG9A transport from the Golgi to the autophagosome; the functions seems to implicate its association with PI3KC3-C2 (PubMed:[16799551](#), PubMed:[20643123](#), PubMed:[24056303](#)). Involved in maturation of autophagosomes and degradative endocytic trafficking independently of BECN1 but depending on its association with a class C Vps complex (possibly the HOPS complex); the association is also proposed to promote autophagosome recruitment and activation of Rab7 and endosome-endosome fusion events (PubMed:[18552835](#), PubMed:[28306502](#)). Enhances class C Vps complex (possibly HOPS complex) association with a SNARE complex and promotes fusogenic SNARE complex formation during late endocytic membrane fusion (PubMed:[24550300](#)). In case of negative- strand RNA virus infection is required for efficient virus entry, promotes endocytic transport of virions and is implicated in a VAMP8- specific fusogenic SNARE complex assembly (PubMed:[24550300](#)).

Cellular Location

Late endosome. Lysosome. Cytoplasmic vesicle, autophagosome. Early endosome. Endoplasmic reticulum. Midbody. Chromosome, centromere. Note=Colocalizes with RAB9-positive compartments involved in retrograde transport from late endosomes to trans-Golgi network. Colocalization with early endosomes is only partial (PubMed:24056303). Recruited to autophagosome following interaction with RUBCNL/PACER (PubMed:28306502)

Tissue Location

Highly expressed in brain, lung, kidney and liver.

UVRAG Antibody (L133) - Protocols

Provided below are standard protocols that you may find useful for product applications.

UVRAG Antibody (L133) - Images

Immunofluorescence staining of Autophagy UVRAG antibody (Cat# AP1850d) on Methanol-fixed HeLa cells. Data courtesy of Dr. Eeva-Liisa Eskelinen, University of Helsinki, Finland.

Western blot analysis of anti-hUVRAG (Center) Pab (RB10846) in mouse liver tissue lysate. hUVRAG (Center)(arrow) was detected using the purified Pab.

Formalin-fixed and paraffin-embedded human hepatocarcinoma tissue reacted with hUVRAG (N-term L133), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.

UVRAG Antibody (L133) - Background

UVRAG complements the ultraviolet sensitivity of xeroderma pigmentosum group C cells and

encodes a protein with a C2 domain. The protein activates the Beclin1-PI(3)KC3 complex, promoting autophagy and suppressing the proliferation and tumorigenicity of human colon cancer cells. Chromosomal aberrations involving this gene are associated with left-right axis malformation and mutations in this gene have been associated with colon cancer.
