PCGF6 Antibody (C-term) - Protein Information

Name PCGF6

Synonyms MBLR, RNF134

Function Transcriptional repressor (PubMed:<u>12167161</u>). May modulate the levels of histone H3K4Me3 by activating KDM5D histone demethylase (PubMed:<u>17320162</u>). Component of a Polycomb group (PcG) multiprotein PRC1-like complex, a complex class required to maintain the transcriptionally repressive state of many genes, including Hox genes, throughout development. PcG PRC1 complex acts via chromatin remodeling and modification of histones; it mediates monoubiquitination of histone H2A 'Lys-119', rendering chromatin heritably changed in its expressibility (PubMed:<u>12167161</u>). Within the PRC1-like complex, regulates RNF2 ubiquitin ligase activity (PubMed:<u>26151332</u>).
