

## **RBMX Antibody (Center)**

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP21472c

## **Specification**

# **RBMX Antibody (Center) - Product Information**

Application WB,E
Primary Accession P38159
Reactivity Human
Host Rabbit
Clonality polyclonal
Isotype Rabbit IgG
Calculated MW 42332

## **RBMX Antibody (Center) - Additional Information**

#### **Gene ID 27316**

#### **Other Names**

RNA-binding motif protein, X chromosome, Glycoprotein p43, Heterogeneous nuclear ribonucleoprotein G, hnRNP G, RNA-binding motif protein, X chromosome, N-terminally processed, RBMX, HNRPG, RBMXP1

#### Target/Specificity

This RBMX antibody is generated from a rabbit immunized with a KLH conjugated synthetic peptide between 222-252 amino acids from the Central region of human RBMX.

#### **Dilution**

WB~~1:2000

E~~Use at an assay dependent concentration.

#### **Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

#### Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

## **Precautions**

RBMX Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

## **RBMX Antibody (Center) - Protein Information**

#### **Name RBMX**

Synonyms HNRPG, RBMXP1

**Function** RNA-binding protein that plays several role in the regulation of pre- and post-transcriptional processes. Implicated in tissue- specific regulation of gene transcription and alternative splicing of several pre-mRNAs. Binds to and stimulates transcription from the tumor suppressor TXNIP gene promoter; may thus be involved in tumor suppression. When associated with SAFB, binds to and stimulates transcription from the SREBF1 promoter. Associates with nascent mRNAs transcribed by RNA polymerase II. Component of the supraspliceosome complex that regulates pre-mRNA alternative splice site selection. Can either activate or suppress exon inclusion; acts additively with TRA2B to promote exon 7 inclusion of the survival motor neuron SMN2. Represses the splicing of MAPT/Tau exon 10. Binds preferentially to single-stranded 5'-CC[A/C]-rich RNA sequence motifs localized in a single-stranded conformation; probably binds RNA as a homodimer. Binds non-specifically to pre-mRNAs. Also plays a role in the cytoplasmic TNFR1 trafficking pathways; promotes both the IL-1-beta-mediated inducible proteolytic cleavage of TNFR1 ectodomains and the release of TNFR1 exosome-like vesicles to the extracellular compartment.

#### **Cellular Location**

Nucleus Note=Component of ribonucleosomes. Localizes in numerous small granules in the nucleus

#### **Tissue Location**

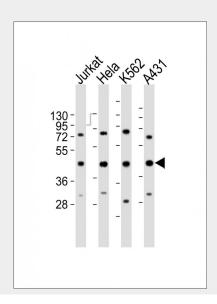

Expressed strongly in oral keratinocytes, but only weakly detected in oral squamous cell carcinomas (at protein level)

## **RBMX Antibody (Center) - Protocols**

Provided below are standard protocols that you may find useful for product applications.

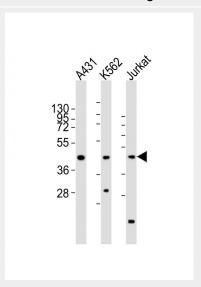

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
