

PSME4 Antibody (N-Term)
Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP21982a

Specification

PSME4 Antibody (N-Term) - Product Information

Application	WB,E
Primary Accession	Q14997
Other Accession	F1MKX4
Reactivity	Human
Predicted	Bovine
Host	Rabbit
Clonality	polyclonal
Isotype	Rabbit IgG
Calculated MW	211334

PSME4 Antibody (N-Term) - Additional Information

Gene ID 23198

Other Names

Proteasome activator complex subunit 4, Proteasome activator PA200, PSME4, KIAA0077

Target/Specificity

This PSME4 antibody is generated from a rabbit immunized with a KLH conjugated synthetic peptide between 503-535 amino acids from human PSME4.

Dilution

WB~~1:2000

E~~Use at an assay dependent concentration.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

PSME4 Antibody (N-Term) is for research use only and not for use in diagnostic or therapeutic procedures.

PSME4 Antibody (N-Term) - Protein Information

Name PSME4 ([HGNC:20635](#))

Function Associated component of the proteasome that specifically recognizes acetylated

histones and promotes ATP- and ubiquitin- independent degradation of core histones during spermatogenesis and DNA damage response. Recognizes and binds acetylated histones via its bromodomain-like (BRDL) region and activates the proteasome by opening the gated channel for substrate entry. Binds to the core proteasome via its C-terminus, which occupies the same binding sites as the proteasomal ATPases, opening the closed structure of the proteasome via an active gating mechanism. Component of the spermatoproteasome, a form of the proteasome specifically found in testis: binds to acetylated histones and promotes degradation of histones, thereby participating actively to the exchange of histones during spermatogenesis. Also involved in DNA damage response in somatic cells, by promoting degradation of histones following DNA double-strand breaks.

Cellular Location

Cytoplasm, cytosol. Nucleus. Nucleus speckle Note=Found in nuclear foci following treatment with ionizing radiation, but not with ultraviolet irradiation or H₂O₂

PSME4 Antibody (N-Term) - Protocols

Provided below are standard protocols that you may find useful for product applications.
