

**ERI1 Antibody**  
**Purified Rabbit Polyclonal Antibody (Pab)**  
**Catalog # AP50075**

**Specification**

---

**ERI1 Antibody - Product Information**

Application	WB
Primary Accession	<a href="#">Q8IV48</a>
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Calculated MW	40 KDa
Antigen Region	276-305

**ERI1 Antibody - Additional Information**

**Gene ID** 90459

**Other Names**

3'-5' exoribonuclease 1, 31--, 3'-5' exonuclease ERI1, Eri-1 homolog, Histone mRNA 3'-end-specific exoribonuclease, Histone mRNA 3'-exonuclease 1, Protein 3'hExo, HEXO, ERI1, 3'EXO, THEX1

**Dilution**

WB~~ 1:1000

**Format**

Rabbit IgG in phosphate buffered saline (without Mg<sup>2+</sup> and Ca<sup>2+</sup>), pH 7.4, 150mM NaCl, 0.09% (W/V) sodium azide and 50% glycerol.

**Storage Conditions**

-20°C

**ERI1 Antibody - Protein Information**

**Name** ERI1

**Synonyms** 3'EXO, THEX1

**Function**

RNA exonuclease that binds to the 3'-end of histone mRNAs and degrades them, suggesting that it plays an essential role in histone mRNA decay after replication (PubMed: <a href="http://www.uniprot.org/citations/14536070" target="\_blank">14536070</a>, PubMed: <a href="http://www.uniprot.org/citations/16912046" target="\_blank">16912046</a>, PubMed: <a href="http://www.uniprot.org/citations/17135487" target="\_blank">17135487</a>). A 2' and 3'-hydroxyl groups at the last nucleotide of the histone 3'-end is required for efficient degradation of RNA substrates (PubMed: <a href="http://www.uniprot.org/citations/14536070" target="\_blank">14536070</a>, PubMed: <a href="http://www.uniprot.org/citations/16912046" target="\_blank">16912046</a>, PubMed: <a href="http://www.uniprot.org/citations/17135487" target="\_blank">17135487</a>)

target="\_blank">17135487</a>). Also able to degrade the 3'-overhangs of short interfering RNAs (siRNAs) in vitro, suggesting a possible role as regulator of RNA interference (RNAi) (PubMed:<a href="http://www.uniprot.org/citations/14961122" target="\_blank">14961122</a>). Required for binding the 5'-ACCCA-3' sequence present in stem-loop structure (PubMed:<a href="http://www.uniprot.org/citations/14536070" target="\_blank">14536070</a>, PubMed:<a href="http://www.uniprot.org/citations/16912046" target="\_blank">16912046</a>). Able to bind other mRNAs (PubMed:<a href="http://www.uniprot.org/citations/14536070" target="\_blank">14536070</a>, PubMed:<a href="http://www.uniprot.org/citations/16912046" target="\_blank">16912046</a>). Required for 5.8S rRNA 3'-end processing (By similarity). Also binds to 5.8s ribosomal RNA (By similarity). Binds with high affinity to the stem-loop structure of replication-dependent histone pre-mRNAs (PubMed:<a href="http://www.uniprot.org/citations/14536070" target="\_blank">14536070</a>, PubMed:<a href="http://www.uniprot.org/citations/17135487" target="\_blank">17135487</a>, PubMed:<a href="http://www.uniprot.org/citations/16912046" target="\_blank">16912046</a>). In vitro, does not have sequence specificity (PubMed:<a href="http://www.uniprot.org/citations/17135487" target="\_blank">17135487</a>). In vitro, has weak DNA exonuclease activity (PubMed:<a href="http://www.uniprot.org/citations/17135487" target="\_blank">17135487</a>). In vitro, shows biphasic kinetics such that there is rapid hydrolysis of the last three unpaired RNA nucleotides in the 39 flanking sequence followed by a much slower cleavage through the stem that occurs over a longer incubation period in the order of hours (PubMed:<a href="http://www.uniprot.org/citations/17135487" target="\_blank">17135487</a>).

#### ERI1 Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)
- [Dot Blot](#)
- [Immunohistochemistry](#)
- [Immunofluorescence](#)
- [Immunoprecipitation](#)
- [Flow Cytometry](#)
- [Cell Culture](#)

#### ERI1 Antibody - Images

Western blot analysis of lysate from HeLa cell line, using ERI1 Antibody (C21254). C21254 was diluted at 1:1000. A goat anti-rabbit IgG H&L (HRP) at 1:5000 dilution was used as the secondary antibody. Lysate at 35 µg.

### **ERI1 Antibody - Background**

RNA exonuclease that binds to the 3'-end of histone mRNAs and degrades them, suggesting that it plays an essential role in histone mRNA decay after replication. A 2' and 3'-hydroxyl groups at the last nucleotide of the histone 3'-end is required for efficient degradation of RNA substrates. Also able to degrade the 3'-overhangs of short interfering RNAs (siRNAs) *in vitro*, suggesting a possible role as regulator of RNA interference (RNAi). Requires for binding the 5'-ACCCA-3' sequence present in stem-loop structure. Able to bind other mRNAs. Required for 5.8S rRNA 3'-end processing. Also binds to 5.8S ribosomal RNA. Binds with high affinity to the stem-loop structure of replication-dependent histone pre-mRNAs.
