**SYT11 Antibody - Protein Information****Name** SYT11 ([HGNC:19239](#))**Synonyms** KIAA0080**Function**

Synaptotagmin family member involved in vesicular and membrane trafficking which does not bind Ca<sup>2+</sup>. Inhibits clathrin- mediated and bulk endocytosis, functions to ensure precision in vesicle retrieval. Plays an important role in dopamine transmission by regulating endocytosis and the vesicle-recycling process. Essential component of a neuronal vesicular trafficking pathway that differs from the synaptic vesicle trafficking pathway but is crucial for development and synaptic plasticity. In macrophages and microglia, inhibits the conventional cytokine secretion, of at least IL6 and TNF, and phagocytosis. In astrocytes, regulates lysosome exocytosis, mechanism required for the repair of injured astrocyte cell membrane (By similarity). Required for the ATP13A2-mediated regulation of the autophagy-lysosome pathway (PubMed:<a href="http://www.uniprot.org/citations/27278822" target="\_blank">27278822</a>).

### SYT11 Antibody - Images

Western blot analysis of lysate from 293T cell line, using SYT11 Antibody (AP50627). AP50627 was diluted at 1:1000. A goat anti-rabbit IgG H&L (HRP) at 1:5000 dilution was used as the secondary antibody. Lysate at 35ug.

**SYT11 Antibody - Background**

May be involved in Ca(2+)-dependent exocytosis of secretory vesicles through Ca(2+) and phospholipid binding to the C2 domain or may serve as Ca(2+) sensors in the process of vesicular trafficking and exocytosis (By similarity).
