**SNTB2/Syntrophin-3 Polyclonal Antibody - Protein Information****Name** SNTB2**Synonyms** D16S2531E, SNT2B2, SNTL**Function**

Adapter protein that binds to and probably organizes the subcellular localization of a variety of membrane proteins. May link various receptors to the actin cytoskeleton and the dystrophin glycoprotein complex. May play a role in the regulation of secretory granules via its interaction with PTPRN.

**Cellular Location**

Membrane. Cytoplasmic vesicle, secretory vesicle membrane; Peripheral membrane protein. Cell junction Cytoplasm, cytoskeleton. Note=Membrane-associated. In muscle, it is exclusively localized at the neuromuscular junction (By similarity). In insulinoma cell line, it is enriched in secretory granules

**Tissue Location**

Ubiquitous. Isoform 1 is the predominant isoform. Weak level of isoform 2 is present in all tested

tissues, except in liver and heart where it is highly expressed
