PSMA7 Polyclonal Antibody<br>Purified Rabbit Polyclonal Antibody (Pab)<br>Catalog \# AP59233

## Specification

PSMA7 Polyclonal Antibody - Product Information

Application
Primary Accession
Reactivity
Host
Clonality
Calculated MW

IHC-P, WB
014818
Rat, Pig, Dog, Bovine
Rabbit
Polyclonal
27887

## PSMA7 Polyclonal Antibody - Additional Information

Gene IID 5688
Other Names
Proteasome subunit alpha type-7, Proteasome subunit RC6-1, Proteasome subunit XAPC7, PSMA7, HSPC

Format
0.01M TBS(pH7.4), 0.09\% (W/V) sodium azide and 50\% Glyce

## Storage

Store at $-20^{\circ} \mathrm{C}$ for one year. Avoid repeated freeze/thaw cycles. When reconstituted in sterile pH 7.4 0.01M PBS or diluent of antibody the antibody is stable for at least two weeks at $2-4{ }^{\circ} \mathrm{C}$.

## PSMA7 Polyclonal Antibody - Protein Information

Name PSMA7
Synonyms HSPC

## Function

Component of the 20S core proteasome complex involved in the proteolytic degradation of most intracellular proteins. This complex plays numerous essential roles within the cell by associating with different regulatory particles. Associated with two 19S regulatory particles, forms the 26S proteasome and thus participates in the ATP- dependent degradation of ubiquitinated proteins. The 26 S proteasome plays a key role in the maintenance of protein homeostasis by removing misfolded or damaged proteins that could impair cellular functions, and by removing proteins whose functions are no longer required. Associated with the PA200 or PA28, the 20S proteasome mediates ubiquitin- independent protein degradation. This type of proteolysis is required in several pathways including spermatogenesis (20S-PA200 complex) or generation of a subset of MHC class I-presented antigenic peptides (20S-PA28 complex). Inhibits the transactivation function of HIF-1A under both normoxic and hypoxia-mimicking conditions. The interaction with EMAP2 increases the proteasome-mediated HIF-1A degradation under the hypoxic conditions. Plays a role in hepatitis C virus internal ribosome entry site-mediated translation. Mediates nuclear translocation of the
androgen receptor (AR) and thereby enhances androgen-mediated transactivation. Promotes MAVS degradation and thereby negatively regulates MAVS-mediated innate immune response.

## Cellular Location

Cytoplasm. Nucleus. Note=Translocated from the cytoplasm into the nucleus following interaction with AKIRIN2, which bridges the proteasome with the nuclear import receptor IPO9

## PSMA7 Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

PSMA7 Polyclonal Antibody - Images

Paraformaldehyde-fixed, paraffin embedded (human liver cancer); Antigen retrieval by boiling in sodium citrate buffer ( pH 6.0 ) for 15 min ; Block endogenous peroxidase by $3 \%$ hydrogen peroxide for 20 minutes; Blocking buffer (normal goat serum) at $37 \sum \mathrm{C}$ for 30 min ; Antibody incubation with (PSMA7) Polyclonal Antibody, Unconjugated (bs-9356R) at 1:500 overnight at $4 \Sigma \mathrm{C}$, followed by a conjugated secondary (sp-0023) for 20 minutes and DAB staining.

Sample: Bone (Mouse) Lysate at 40 ug
Primary: Anti-PSMA7 (bs-9356R) at 1/300 dilution
Secondary: IRDye800CW Goat Anti-Rabbit IgG at 1/20000 dilution Predicted band size: 28 kD
Observed band size: 35 kD
