Synonyms TBR2

#### **Function**

Functions as a transcriptional activator playing a crucial role during development. Functions in trophoblast differentiation and later in gastrulation, regulating both mesoderm delamination and endoderm specification. Plays a role in brain development being required for the specification and the proliferation of the intermediate progenitor cells and their progeny in the cerebral cortex (PubMed:<a href="http://www.uniprot.org/citations/17353897" target="\_blank">17353897</a>). Required for differentiation and migration of unipolar dendritic brush cells (PubMed:<a href="http://www.uniprot.org/citations/33488348" target="\_blank">33488348</a>). Also involved

in the differentiation of CD8+ T-cells during immune response regulating the expression of lytic effector genes (PubMed:<a href="http://www.uniprot.org/citations/17566017" target="\_blank">17566017</a>).

**Cellular Location** Nucleus.

**Tissue Location** Expressed in CD8+ T-cells.
