Anti-Caspase 12 Antibody - Protein Information

Name CASP12

Function

May function as a negative regulator of inflammatory responses and innate immunity. May reduce cytokine release in response to bacterial lipopolysaccharide during infection. Reduces activation of NF-kappa-B in response to TNF (PubMed: <http://www.uniprot.org/citations/15129283> target="_blank">15129283). May lack protease activity (Probable).

Tissue Location

Widely expressed, with highest levels in lung.

Anti-Caspase 12 Antibody - Images

Western blot analysis of Caspase 12 expression in HEK293T (A), A549 (B), U2OS (C), mouse brain (D), mouse spleen (E), rat brain (F) whole cell lysates.

Immunohistochemical analysis of Caspase 12 staining in human lung cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
