Anti-Cyclin B3 Antibody - Protein Information**Name** CCNB3**Synonyms** CYCB3**Function**

Cyclins are positive regulatory subunits of the cyclin- dependent kinases (CDKs), and thereby play an essential role in the control of the cell cycle, notably via their destruction during cell division. Its tissue specificity suggest that it may be required during early meiotic prophase I.

Cellular Location

Nucleus.

Tissue Location

Testis specific. In testis, it is expressed in developing germ cells, but not in Leydig cells. Weakly or not expressed in other tissues.
