Anti-ABHD14B Antibody - Protein Information**Name** ABHD14B {ECO:0000303|PubMed:31478652, ECO:0000312|HGNC:HGNC:28235}**Function**

Acts as an atypical protein-lysine deacetylase in vitro (PubMed:31478652). Catalyzes the deacetylation of lysine residues using CoA as substrate, generating acetyl-CoA and the free amine of protein- lysine residues (PubMed:31478652). Additional experiments are however required to confirm the protein-lysine deacetylase activity in vivo (Probable). Has hydrolase activity towards various

surrogate p- nitrophenyl (pNp) substrates, such as pNp-butyrate, pNp-acetate and pNp-octanoate in vitro, with a strong preference for pNp-acetate (PubMed:14672934, PubMed:31478652). May activate transcription (PubMed:14672934).

Cellular Location

Cytoplasm. Nucleus. Note=Predominantly cytoplasmic

Tissue Location

Ubiquitous (PubMed:14672934). Detected in spleen, thymus, prostate, testis, ovary, small intestine, colon, peripheral blood leukocyte, heart, placenta, lung, liver, skeletal muscle, pancreas and kidney (PubMed:14672934).

Anti-ABHD14B Antibody - Images

Western blot analysis of ABHD14B expression in mouse spleen (A), rat thymus (B), Jurkat (C), K562 (D), HEK293T (E) whole cell lysates.

Immunohistochemical analysis of ABHD14B staining in human brain formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.
