

**ATG7 mouse Monoclonal Antibody(3D6)**  
**Catalog # AP63849****Specification****ATG7 mouse Monoclonal Antibody(3D6) - Product Information**

Application	IHC-P, IF
Primary Accession	<a href="#">O95352</a>
Reactivity	Human, Mouse, Rat
Host	Mouse
Clonality	Monoclonal

**ATG7 mouse Monoclonal Antibody(3D6) - Additional Information****Gene ID** 10533**Other Names**

Ubiquitin-like modifier-activating enzyme ATG7 (ATG12-activating enzyme E1 ATG7)  
(Autophagy-related protein 7) (APG7-like) (hAGP7) (Ubiquitin-activating enzyme E1-like protein)

**Dilution**

IHC-P~~N/A

IF~~IF: 1:50-200 IHC-p 1:50-300

**Format**

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

**Storage Conditions**

-20°C

**ATG7 mouse Monoclonal Antibody(3D6) - Protein Information****Name** ATG7 ([HGNC:16935](#))**Synonyms** APG7L**Function**

E1-like activating enzyme involved in the 2 ubiquitin-like systems required for cytoplasm to vacuole transport (Cvt) and autophagy. Activates ATG12 for its conjugation with ATG5 as well as the ATG8 family proteins for their conjugation with phosphatidylethanolamine. Both systems are needed for the ATG8 association to Cvt vesicles and autophagosomes membranes. Required for autophagic death induced by caspase-8 inhibition. Facilitates LC3-I lipidation with phosphatidylethanolamine to form LC3-II which is found on autophagosomal membranes (PubMed:<a href="http://www.uniprot.org/citations/34161705" target="\_blank">34161705</a>). Required for mitophagy which contributes to regulate mitochondrial quantity and quality by eliminating the mitochondria to a basal level to fulfill cellular energy requirements and preventing excess ROS production. Modulates p53/TP53 activity to regulate cell cycle and survival during metabolic stress. Also plays a key role in the maintenance of axonal homeostasis, the prevention of axonal degeneration, the maintenance of hematopoietic stem cells, the formation of Paneth cell

granules, as well as in adipose differentiation. Plays a role in regulating the liver clock and glucose metabolism by mediating the autophagic degradation of CRY1 (clock repressor) in a time-dependent manner (By similarity).

**Cellular Location**

Cytoplasm. Preautophagosomal structure. Note=Also localizes to discrete punctae along the ciliary axoneme and to the base of the ciliary axoneme

**Tissue Location**

Widely expressed, especially in kidney, liver, lymph nodes and bone marrow.

**ATG7 mouse Monoclonal Antibody(3D6) - Protocols**

Provided below are standard protocols that you may find useful for product applications.
