

### IRS-1 (phospho Tyr896) Polyclonal Antibody

**Catalog # AP67377** 

#### **Specification**

# IRS-1 (phospho Tyr896) Polyclonal Antibody - Product Information

**Application** WB **Primary Accession** P35568 Reactivity Human, Mouse, Rat

Host Rabbit Clonality **Polyclonal** 

### IRS-1 (phospho Tyr896) Polyclonal Antibody - Additional Information

**Gene ID 3667** 

**Other Names** 

IRS1; Insulin receptor substrate 1; IRS-1

WB~~Western Blot: 1/500 - 1/2000. ELISA: 1/40000. Not yet tested in other applications.

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

**Storage Conditions** 

-20°C

## IRS-1 (phospho Tyr896) Polyclonal Antibody - Protein Information

#### Name IRS1

#### **Function**

Signaling adapter protein that participates in the signal transduction from two prominent receptor tyrosine kinases, insulin receptor/INSR and insulin-like growth factor I receptor/IGF1R (PubMed:<a href="http://www.uniprot.org/citations/7541045" target=" blank">7541045</a>, PubMed:<a href="http://www.uniprot.org/citations/33991522" target=" blank">33991522</a>, PubMed:<a href="http://www.uniprot.org/citations/38625937" target="blank">38625937</a>). Plays therefore an important role in development, growth, glucose homeostasis as well as lipid metabolism (PubMed: <a href="http://www.uniprot.org/citations/19639489" target=" blank">19639489</a>). Upon phosphorylation by the insulin receptor, functions as a signaling scaffold that propagates insulin action through binding to SH2 domain-containing proteins including the p85 regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, GRB2 or SHP2 (PubMed: <a href="mailto:kinding-nck1">kinding-nck1</a> regulatory subunit of PI3K, NCK1, NCK2, N href="http://www.uniprot.org/citations/11171109" target=" blank">11171109</a>, PubMed:<a href="http://www.uniprot.org/citations/8265614" target=" blank">8265614</a>). Recruitment of GRB2 leads to the activation of the quanine nucleotide exchange factor SOS1 which in turn triggers the Ras/Raf/MEK/MAPK signaling cascade (By similarity). Activation of the PI3K/AKT pathway is responsible for most of insulin metabolic effects in the cell, and the Ras/Raf/MEK/MAPK is involved in the regulation of gene expression and in cooperation with the PI3K pathway

regulates cell growth and differentiation. Acts a positive regulator of the Wnt/beta-catenin signaling pathway through suppression of DVL2 autophagy-mediated degradation leading to cell proliferation (PubMed:<a href="http://www.uniprot.org/citations/24616100" target="\_blank">24616100</a>).

#### **Cellular Location**

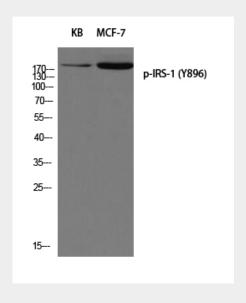

Cytoplasm. Nucleus. Note=Nuclear or cytoplasmic localization of IRS1 correlates with the transition from proliferation to chondrogenic differentiation.

# IRS-1 (phospho Tyr896) Polyclonal Antibody - Protocols

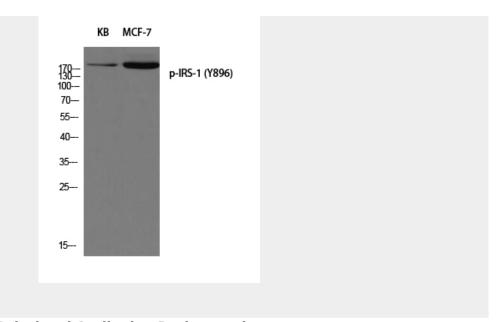

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- <u>Immunoprecipitation</u>
- Flow Cytomety
- Cell Culture

## IRS-1 (phospho Tyr896) Polyclonal Antibody - Images

IRS-1 (phospho Tyr896) Polyclonal Antibody - Background

May mediate the control of various cellular processes by insulin. When phosphorylated by the insulin receptor binds specifically to various cellular proteins containing SH2 domains such as phosphatidylinositol 3-kinase p85 subunit or GRB2. Activates phosphatidylinositol 3-kinase when bound to the regulatory p85 subunit (By similarity).
