

APLF (phospho Ser116) Polyclonal Antibody
Catalog # AP68010**Specification****APLF (phospho Ser116) Polyclonal Antibody - Product Information**

| | |
|-------------------|------------------------|
| Application | IHC-P |
| Primary Accession | Q8IW19 |
| Reactivity | Human, Mouse |
| Host | Rabbit |
| Clonality | Polyclonal |

APLF (phospho Ser116) Polyclonal Antibody - Additional Information

Gene ID 200558

Other Names

APLF; C2orf13; PALF; XIP1; Aprataxin and PNK-like factor; Apurinic-apyrimidinic endonuclease APLF; PNK and APTX-like FHA domain-containing protein; XRCC1-interacting protein 1

Dilution

IHC-P~~N/A

Format

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

Storage Conditions

-20°C

APLF (phospho Ser116) Polyclonal Antibody - Protein Information**Name** APLF {ECO:0000303|PubMed:17353262, ECO:0000312|HGNC:HGNC:28724}**Function**

Histone chaperone involved in single-strand and double-strand DNA break repair (PubMed: [17353262](http://www.uniprot.org/citations/17353262), PubMed: [17396150](http://www.uniprot.org/citations/17396150), PubMed: [21211721](http://www.uniprot.org/citations/21211721), PubMed: [21211722](http://www.uniprot.org/citations/21211722), PubMed: [29905837](http://www.uniprot.org/citations/29905837), PubMed: [30104678](http://www.uniprot.org/citations/30104678)). Recruited to sites of DNA damage through interaction with branched poly-ADP-ribose chains, a polymeric post-translational modification synthesized transiently at sites of chromosomal damage to accelerate DNA strand break repair reactions (PubMed: [17353262](http://www.uniprot.org/citations/17353262), PubMed: [17396150](http://www.uniprot.org/citations/17396150), PubMed: [21211721](http://www.uniprot.org/citations/21211721), PubMed: [30104678](http://www.uniprot.org/citations/30104678)). Following recruitment to DNA damage sites, acts as a histone chaperone that mediates histone eviction

during DNA repair and promotes recruitment of histone variant MACROH2A1 (PubMed:21211722, PubMed:29905837, PubMed:30104678). Also has a nuclease activity: displays apurinic-apyrimidinic (AP) endonuclease and 3'-5' exonuclease activities in vitro (PubMed:17353262, PubMed:17396150). Also able to introduce nicks at hydroxyuracil and other types of pyrimidine base damage (PubMed:17353262, PubMed:17396150). Together with PARP3, promotes the retention of the LIG4-XRCC4 complex on chromatin and accelerate DNA ligation during non-homologous end-joining (NHEJ) (PubMed:21211721, PubMed:23689425). Also acts as a negative regulator of cell pluripotency by promoting histone exchange (By similarity). Required for the embryo implantation during the epithelial to mesenchymal transition in females (By similarity).

Cellular Location

Nucleus. Chromosome. Cytoplasm, cytosol. Note=Localizes to DNA damage sites (PubMed:18172500, PubMed:18474613, PubMed:21211721, PubMed:21211722, PubMed:23689425). Accumulates at single-strand breaks and double-strand breaks via the PBZ-type zinc fingers (PubMed:18172500)

APLF (phospho Ser116) Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- [Western Blot](#)
- [Blocking Peptides](#)

APLF (phospho Ser116) Polyclonal Antibody - Images

Immunohistochemical analysis of paraffin-embedded Human breast cancer. Antibody was diluted at 1:100(4°,overnight). High-pressure and temperature Tris-EDTA,pH8.0 was used for antigen retrieval. Negative contrl (right) obtained from antibody was pre-absorbed by immunogen peptide.
