

CCDC99 Polyclonal Antibody
Catalog # AP68888**Specification****CCDC99 Polyclonal Antibody - Product Information**

| | |
|-------------------|------------------------|
| Application | WB |
| Primary Accession | Q96EA4 |
| Reactivity | Human |
| Host | Rabbit |
| Clonality | Polyclonal |

CCDC99 Polyclonal Antibody - Additional Information**Gene ID** 54908**Other Names**

CCDC99; Protein Spindly; hSpindly; Arsenite-related gene 1 protein; Coiled-coil domain-containing protein 99; Rhabdomyosarcoma antigen MU-RMS-40.4A

Dilution

WB~~Western Blot: 1/500 - 1/2000. ELISA: 1/40000. Not yet tested in other applications.

Format

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

Storage Conditions

-20°C

CCDC99 Polyclonal Antibody - Protein Information**Name** SPDL1 {ECO:0000255|HAMAP-Rule:MF_03041}**Function**

Required for the localization of dynein and dynactin to the mitotic kintochore. Dynein is believed to control the initial lateral interaction between the kinetochore and spindle microtubules and to facilitate the subsequent formation of end-on kinetochore-microtubule attachments mediated by the NDC80 complex. Also required for correct spindle orientation. Does not appear to be required for the removal of spindle assembly checkpoint (SAC) proteins from the kinetochore upon bipolar spindle attachment (PubMed: [17576797](http://www.uniprot.org/citations/17576797), PubMed: [19468067](http://www.uniprot.org/citations/19468067)). Acts as an adapter protein linking the dynein motor complex to various cargos and converts dynein from a non-processive to a highly processive motor in the presence of dynactin. Facilitates the interaction between dynein and dynactin and activates dynein processivity (the ability to move along a microtubule for a long distance without falling off the track) (PubMed: [25035494](http://www.uniprot.org/citations/25035494)). Plays a role in cell migration (PubMed: [30258100](http://www.uniprot.org/citations/30258100)).

Cellular Location

Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Chromosome, centromere, kinetochore. Nucleus Cytoplasm, cytoskeleton, spindle pole. Note=Localizes to the nucleus in interphase and to the kinetochore in early prometaphase. Relocalizes to the mitotic spindle pole before metaphase and is subsequently lost from the spindle poles after chromosome congression is completed. Removal of this protein from the kinetochore requires the dynein/dynactin complex

CCDC99 Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.
