

## **CYP2W1 Polyclonal Antibody**

**Catalog # AP69408** 

## **Specification**

# **CYP2W1 Polyclonal Antibody - Product Information**

Application WB
Primary Accession Q8TAV3
Reactivity Human
Host Rabbit
Clonality Polyclonal

## CYP2W1 Polyclonal Antibody - Additional Information

Gene ID 54905

**Other Names** 

CYP2W1; Cytochrome P450 2W1; CYPIIW1

Dilution

WB~~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300. Immunofluorescence: 1/200 - 1/1000. ELISA: 1/40000. Not yet tested in other applications.

#### **Format**

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

**Storage Conditions** 

-20°C

### CYP2W1 Polyclonal Antibody - Protein Information

Name CYP2W1 {ECO:0000303|PubMed:26936974, ECO:0000312|HGNC:HGNC:20243}

## **Function**

A cytochrome P450 monooxygenase that may play a role in retinoid and phospholipid metabolism (PubMed:<a href="http://www.uniprot.org/citations/22591743" target="\_blank">22591743</a>, PubMed:<a href="http://www.uniprot.org/citations/26936974" target="\_blank">26936974</a>). Catalyzes the hydroxylation of saturated carbon hydrogen bonds. Hydroxylates all trans-retinoic acid (atRA) to 4- hydroxyretinoate and may regulate atRA clearance. Other retinoids such as all-trans retinol and all-trans retinal are potential endogenous substrates (PubMed:<a href="http://www.uniprot.org/citations/26936974" target="\_blank">26936974</a>). Catalyzes both epoxidation of double bonds and hydroxylation of carbon hydrogen bonds of the fatty acyl chain of 1-acylphospholipids/2-lysophospholipids. Can metabolize various lysophospholipids classes including lysophosphatidylcholines (LPCs), lysophosphatidylinositols (LPIs), lysophosphatidylserines (LPSs), lysophosphatidylglycerols (LPGs), lysophosphatidylethanolamines (LPEs) and lysophosphatidic acids (LPAs) (PubMed:<a href="http://www.uniprot.org/citations/22591743" target="\_blank">23591743</a> (a>). Has low or hydrogen bonds and hydroxylation of carbon hydrogen bonds of the fatty acyl chain of 1-acylphospholipids/2-lysophosphatidylglycerols (LPGs), lysophosphatidylethanolamines (LPEs) and lysophosphatidic acids (LPAs) (PubMed:<a href="http://www.uniprot.org/citations/22591743" target="\_blank">23591743</a> (a>). Has low or

href="http://www.uniprot.org/citations/22591743" target="\_blank">22591743</a>). Has low or no activity toward 2-acylphospholipids/1-lysophospholipids, diacylphospholipids and free fatty acids (PubMed:<a href="http://www.uniprot.org/citations/26936974"

target="\_blank">26936974</a>, PubMed:<a href="http://www.uniprot.org/citations/22591743" target="\_blank">22591743</a>). May play a role in tumorigenesis by activating procarcinogens such as aflatoxin B1, polycyclic aromatic hydrocarbon dihydrodiols and aromatic amines (PubMed:<a href="http://www.uniprot.org/citations/20805301" target="\_blank">20805301</a>, PubMed:<a href="http://www.uniprot.org/citations/16551781" target="\_blank">16551781</a>, PubMed:<a href="http://www.uniprot.org/citations/24278521" target="\_blank">24278521</a>). Mechanistically, uses molecular oxygen inserting one oxygen atom into a substrate, and reducing the second into a water molecule, with two electrons provided by NADPH via cytochrome P450 reductase (CPR; NADPH-ferrihemoprotein reductase) (PubMed:<a href="http://www.uniprot.org/citations/22591743" target="\_blank">22591743</a>, PubMed:<a href="http://www.uniprot.org/citations/26936974" target="\_blank">26936974</a>).

#### **Cellular Location**

Endoplasmic reticulum lumen. Cell membrane. Microsome membrane. Note=About 8% are expressed on the cell surface.

#### **Tissue Location**

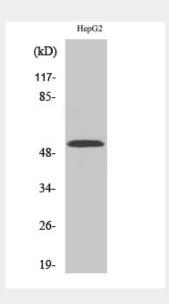

Very low levels are detected in fetal and adult tissues. Highly expressed in several tumor samples, in particular colon and adrenal tumors.

#### CYP2W1 Polyclonal Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cvtometv
- Cell Culture

CYP2W1 Polyclonal Antibody - Background

Tel: 858.875.1900 Fax: 858.875.1999

Seems to have broad catalytic activity towards several chemicals, including polycyclic aromatic hydrocarbon dihydrodiols and aromatic amines (PubMed:16551781, PubMed:24278521). Active also in the metabolism of indoline substrates and is able to activate aflatoxin B1 into cytotoxic products (PubMed:20805301). Furthermore, it seems to be involved in the oxydation of lysophospholipids and fatty acids (PubMed:22591743).
