FRS2 Polyclonal Antibody - Protein Information

Name FRS2

Function
Adapter protein that links activated FGR and NGF receptors to downstream signaling pathways. Plays an important role in the activation of MAP kinases and in the phosphorylation of PIK3R1, the regulatory subunit of phosphatidylinositol 3-kinase, in response to ligand-mediated activation of FGFR1. Modulates signaling via SHC1 by competing for a common binding site on NTRK1.

Cellular Location
Endomembrane system. Note=Cytoplasmic, membrane- bound

Tissue Location
Highly expressed in heart, brain, spleen, lung, liver, skeletal muscle, kidney and testis
