#### **GDF-9 Polyclonal Antibody - Protein Information**

### Name GDF9

#### **Function**

Required for ovarian folliculogenesis. Promotes primordial follicle development. Stimulates granulosa cell proliferation. Promotes cell transition from G0/G1 to S and G2/M phases, through an increase of CCND1 and CCNE1 expression, and RB1 phosphorylation. It regulates STAR expression and cAMP-dependent progesterone release in granulosa and thecal cells. Attenuates the suppressive effects of activin A on STAR expression and progesterone production by increasing the expression of inhibin B. It suppresses FST and FSTL3 production in granulosa-lutein cells.

### **Cellular Location**

Secreted.

# **Tissue Location**

Expressed in ovarian granulosa cells. Present in oocytes of primary follicles (at protein level)

# **GDF-9 Polyclonal Antibody - Images**

Western Blot analysis of various cells using GDF-9 Polyclonal Antibody

Immunohistochemical analysis of paraffin-embedded Human lung cancer. Antibody was diluted at 1:100(4°,overnight). High-pressure and temperature Tris-EDTA,pH8.0 was used for antigen retrieval. Negetive contrl (right) obtaned from antibody was pre-absorbed by immunogen peptide.
