hnRNP F Polyclonal Antibody - Protein Information**Name** HNRNPF**Synonyms** HNRPF**Function**

Component of the heterogeneous nuclear ribonucleoprotein (hnRNP) complexes which provide the substrate for the processing events that pre-mRNAs undergo before becoming functional, translatable mRNAs in the cytoplasm. Plays a role in the regulation of alternative splicing events. Binds G-rich sequences in pre-mRNAs and keeps target RNA in an unfolded state.

Cellular Location

Nucleus, nucleoplasm.

Tissue Location

Expressed ubiquitously.
