L-type Ca⁺⁺ CP γ 7 Polyclonal Antibody - Protein Information**Name** CACNG7**Function**

Regulates the activity of L-type calcium channels that contain CACNA1C as pore-forming subunit (PubMed:21127204). Regulates the trafficking and gating properties of AMPA-selective glutamate receptors (AMPA receptors). Promotes their targeting to the cell membrane and synapses and modulates their gating properties by slowing their rates of activation, deactivation and desensitization and by mediating their resensitization. Displays subunit-specific AMPA receptor regulation. Shows specificity only for GRIA1 and GRIA2 (PubMed:21172611).

Cellular Location

Cell membrane; Multi-pass membrane protein

Tissue Location

Detected in heart left ventricle (PubMed:21127204). Widely expressed.
