

## **MITF Polyclonal Antibody**

**Catalog # AP70952** 

### **Specification**

## **MITF Polyclonal Antibody - Product Information**

Application Primary Accession Reactivity Host Clonality WB, IHC-P, IF
O75030
Human, Mouse
Rabbit
Polyclonal

# **MITF Polyclonal Antibody - Additional Information**

### **Gene ID 4286**

## **Other Names**

MITF; BHLHE32; Microphthalmia-associated transcription factor; Class E basic helix-loop-helix protein 32; bHLHe32

### **Dilution**

WB~~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300. Immunofluorescence: 1/200 - 1/1000. ELISA: 1/10000. Not yet tested in other applications. IHC-P~~N/A IF~~1:50~200

### **Format**

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

# **Storage Conditions**

-20°C

## **MITF Polyclonal Antibody - Protein Information**

Name MITF {ECO:0000303|PubMed:8069297, ECO:0000312|HGNC:HGNC:7105}

## **Function**

Transcription factor that acts as a master regulator of melanocyte survival and differentiation as well as melanosome biogenesis (PubMed:<a href="http://www.uniprot.org/citations/10587587" target="\_blank">10587587</a>, PubMed:<a href="http://www.uniprot.org/citations/22647378" target="\_blank">22647378</a>, PubMed:<a href="http://www.uniprot.org/citations/27889061" target="\_blank">27889061</a>, PubMed:<a href="http://www.uniprot.org/citations/9647758" target="\_blank">9647758</a>). Binds to M-boxes (5'-TCATGTG-3') and symmetrical DNA sequences (E-boxes) (5'-CACGTG-3') found in the promoter of pigmentation genes, such as tyrosinase (TYR) (PubMed:<a href="http://www.uniprot.org/citations/10587587" target="\_blank">10587587</a>, PubMed:<a href="http://www.uniprot.org/citations/22647378" target="\_blank">22647378</a>, PubMed:<a href="http://www.uniprot.org/citations/27889061" target="\_blank">27889061</a>, PubMed:<a href="http://www.uniprot.org/citations/9647758" target="\_blank">9647758</a>). Involved in the cellular response to amino acid availability by

acting downstream of MTOR: in the presence of nutrients, MITF phosphorylation by MTOR promotes its inactivation (PubMed:<a href="http://www.uniprot.org/citations/36608670" target="\_blank">36608670</a>). Upon starvation or lysosomal stress, inhibition of MTOR induces MITF dephosphorylation, resulting in transcription factor activity (PubMed:<a href="http://www.uniprot.org/citations/36608670" target="\_blank">36608670</a>). Plays an important role in melanocyte development by regulating the expression of tyrosinase (TYR) and

tyrosinase-related protein 1 (TYRP1) (PubMed:<a href="http://www.uniprot.org/citations/10587587" target="\_blank">10587587</a>, PubMed:<a href="http://www.uniprot.org/citations/22647378" target="\_blank">22647378</a>, PubMed:<a href="http://www.uniprot.org/citations/27889061" target="\_blank">27889061</a>, PubMed:<a href="http://www.uniprot.org/citations/9647758" target="\_blank">9647758</a>). Plays a critical role in the differentiation of various cell types, such as neural crest-derived melanocytes, mast cells, osteoclasts and optic cup-derived retinal pigment epithelium (PubMed:<a href="http://www.uniprot.org/citations/10587587" target="\_blank">10587587</a>, PubMed:<a href="http://www.uniprot.org/citations/22647378" target="\_blank">22647378</a>, PubMed:<a href="http://www.uniprot.org/citations/27889061" target="\_blank">27889061</a>, PubMed:<a href="http://www.uniprot.org/citations/9647758" target="\_blank">27889061</a>, PubMed:<a href="http://www.uniprot.org/citations/9647758" target="\_blank">9647758</a>).

### **Cellular Location**

Nucleus. Cytoplasm. Lysosome membrane Note=When nutrients are present, recruited to the lysosomal membrane via association with GDP-bound RagC/RRAGC (or RagD/RRAGD): it is then phosphorylated by MTOR (PubMed:23401004, PubMed:36608670) Phosphorylation by MTOR promotes ubiquitination and degradation (PubMed:36608670). Conversely, inhibition of mTORC1, starvation and lysosomal disruption, promotes dephosphorylation and translocation to the nucleus (PubMed:36608670). Phosphorylation by MARK3/cTAK1 promotes association with 14-3-3/YWHA adapters and retention in the cytosol (PubMed:16822840).

#### **Tissue Location**

Expressed in melanocytes (at protein level). [Isoform C2]: Expressed in the kidney and retinal pigment epithelium. [Isoform H2]: Expressed in the kidney. [Isoform Mdel]: Expressed in melanocytes.

## **MITF Polyclonal Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

# **MITF Polyclonal Antibody - Images**

# **MITF Polyclonal Antibody - Background**

Transcription factor that regulates the expression of genes with essential roles in cell differentiation, proliferation and survival. Binds to M-boxes (5'-TCATGTG-3') and symmetrical DNA sequences (E-boxes) (5'-CACGTG-3') found in the promoters of target genes, such as BCL2 and tyrosinase (TYR). Plays an important role in melanocyte development by regulating the expression of tyrosinase (TYR) and tyrosinase-related protein 1 (TYRP1). Plays a critical role in the differentiation of various cell types, such as neural crest-derived melanocytes, mast cells, osteoclasts and optic cup-derived retinal pigment epithelium.
