**Nectin 3 Polyclonal Antibody - Protein Information****Name** NECTIN3 ([HGNC:17664](#))**Synonyms** PRR3, PVRL3**Function**

Plays a role in cell-cell adhesion through heterophilic trans-interactions with nectin-like proteins or nectins, such as trans- interaction with NECTIN2 at Sertoli-spermatid junctions. Trans- interaction with PVR induces activation of CDC42 and RAC small G proteins through common signaling molecules such as SRC and RAP1. Also involved in the formation of cell-cell junctions, including adherens junctions and synapses. Induces endocytosis-mediated down-regulation of PVR from the cell surface, resulting in reduction of cell movement and proliferation. Plays a role in the morphology of the ciliary body.

**Cellular Location**

Cell membrane; Single-pass membrane protein. Postsynaptic cell membrane

**Tissue Location**

Predominantly expressed in testis and placenta as well as in many cell lines, including epithelial cell lines
