

### **THC2 Polyclonal Antibody**

**Catalog # AP72825** 

#### **Specification**

# **THC2 Polyclonal Antibody - Product Information**

**Application Primary Accession** Reactivity Host Clonality

WB, IHC-P 096GX5 Human, Mouse Rabbit **Polyclonal** 

### **THC2 Polyclonal Antibody - Additional Information**

Gene ID 84930

#### **Other Names**

MASTL; GW; GWL; THC2; Serine/threonine-protein kinase greatwall; GW; GWL; hGWL; Microtubule-associated serine/threonine-protein kinase-like; MAST-L

WB~~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300. ELISA: 1/20000. Not yet tested in other applications. IHC-P~~N/A

#### **Format**

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium azide.

# **Storage Conditions**

-20°C

# **THC2 Polyclonal Antibody - Protein Information**

#### Name MASTL

Synonyms GW, GWL, THC2

#### Function

Serine/threonine kinase that plays a key role in M phase by acting as a regulator of mitosis entry and maintenance (PubMed: <a href="http://www.uniprot.org/citations/19680222" target=" blank">19680222</a>). Acts by promoting the inactivation of protein phosphatase 2A (PP2A) during M phase: does not directly inhibit PP2A but acts by mediating phosphorylation and subsequent activation of ARPP19 and ENSA at 'Ser-62' and 'Ser-67', respectively (PubMed: <a href="http://www.uniprot.org/citations/38123684" target=" blank">38123684</a>). ARPP19 and ENSA are phosphatase inhibitors that specifically inhibit the PPP2R2D (PR55-delta) subunit of PP2A. Inactivation of PP2A during M phase is essential to keep cyclin-B1-CDK1 activity high (PubMed:<a href="http://www.uniprot.org/citations/20818157" target=" blank">20818157</a>). Following DNA damage, it is also involved in checkpoint recovery by being inhibited. Phosphorylates histone protein in vitro; however such activity is unsure in vivo. May be involved in

megakaryocyte differentiation.

#### **Cellular Location**

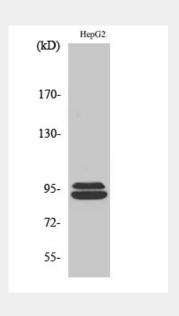

Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Nucleus. Cleavage furrow. Note=During interphase is mainly nuclear, upon nuclear envelope breakdown localizes at the cytoplasm and during mitosis at the centrosomes. Upon mitotic exit moves to the cleavage furrow.

# **THC2 Polyclonal Antibody - Protocols**

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
