EN2 Antibody (C-term) - Images

Western blot analysis of EN2 Antibody (C-term) (Cat. #AP7457f) in mouse cerebellum, brain tissue lysates (35ug/lane). EN2 (arrow) was detected using the purified Pab.

Formalin-fixed and paraffin-embedded human brain tissue reacted with EN2 Antibody (C-term), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.

EN2 Antibody (C-term) (Cat. #AP7457f) flow cytometric analysis of k562 cells (bottom histogram) compared to a negative control cell (top histogram). FITC-conjugated goat-anti-rabbit secondary antibodies were used for the analysis.

EN2 Antibody (C-term) - Background

EN2 is thought to have a role in controlling development. In *Drosophila*, the protein plays an important role during development in segmentation, where it is required for the formation of posterior compartments. Different mutations in the mouse homologs, En1 and En2, produced different developmental defects that frequently are lethal. This protein has been implicated in the control of pattern formation during development of the central nervous system.
