

# Phospho-MSK1 (Ser360) Rabbit mAb

**Catalog # AP74956** 

### **Specification**

# Phospho-MSK1 (Ser360) Rabbit mAb - Product Information

Application WB, IF Primary Accession O75582

Reactivity Human, Mouse, Rat, Hamster

Host Rabbi

Clonality Monoclonal Antibody

Calculated MW 89865

### Phospho-MSK1 (Ser360) Rabbit mAb - Additional Information

**Gene ID 9252** 

Other Names RPS6KA5

**Dilution**WB~~1/500-1/1000
IF~~1/50-1/200

Format Liquid

### Phospho-MSK1 (Ser360) Rabbit mAb - Protein Information

Name RPS6KA5

Synonyms MSK1

### **Function**

Serine/threonine-protein kinase that is required for the mitogen or stress-induced phosphorylation of the transcription factors CREB1 and ATF1 and for the regulation of the transcription factors RELA, STAT3 and ETV1/ER81, and that contributes to gene activation by histone phosphorylation and functions in the regulation of inflammatory genes (PubMed:<a

href="http://www.uniprot.org/citations/11909979" target="\_blank">11909979</a>, PubMed:<a href="http://www.uniprot.org/citations/12569367" target="\_blank">12569367</a>, PubMed:<a href="http://www.uniprot.org/citations/12763138" target="\_blank">12763138</a>, PubMed:<a href="http://www.uniprot.org/citations/18511904" target="\_blank">18511904</a>, PubMed:<a href="http://www.uniprot.org/citations/9687510" target="\_blank">9687510</a>, PubMed:<a href="http://www.uniprot.org/citations/9687510" target="\_blank">9687510</a>, PubMed:<a href="http://www.uniprot.org/citations/9687510" target="\_blank">9873047</a>). Phosphorylates CREB1 and ATF1 in response to mitogenic or stress stimuli such as UV-C irradiation, epidermal growth factor (EGF) and anisomycin (PubMed:<a

href="http://www.uniprot.org/citations/11909979" target="\_blank">11909979</a>, PubMed:<a href="http://www.uniprot.org/citations/9873047" target="\_blank">9873047</a>). Plays an essential role in the control of RELA transcriptional activity in response to TNF and upon

glucocorticoid, associates in the cytoplasm with the glucocorticoid receptor NR3C1 and contributes to RELA inhibition and repression of inflammatory gene expression (PubMed:<a href="http://www.uniprot.org/citations/12628924" target="\_blank">12628924</a>, PubMed:<a href="http://www.uniprot.org/citations/18511904" target="\_blank">18511904</a>). In skeletal myoblasts is required for phosphorylation of RELA at 'Ser-276' during oxidative stress (PubMed:<a href="http://www.uniprot.org/citations/12628924" target="\_blank">12628924</a>). In erythropoietin-stimulated cells, is necessary for the 'Ser-727' phosphorylation of STAT3 and

href="http://www.uniprot.org/citations/12763138" target=" blank">12763138</a>).

regulation of its transcriptional potential (PubMed:<a

Phosphorylates ETV1/ER81 at 'Ser-191' and 'Ser-216', and thereby regulates its ability to stimulate transcription, which may be important during development and breast tumor formation (PubMed:<a href="http://www.uniprot.org/citations/12569367" target="\_blank">12569367</a>). Directly represses transcription via phosphorylation of 'Ser-1' of histone H2A (PubMed:<a href="http://www.uniprot.org/citations/15010469" target="\_blank">15010469</a>). Phosphorylates 'Ser-10' of histone H3 in response to mitogenics, stress stimuli and EGF, which results in the transcriptional activation of several immediate early genes, including proto-oncogenes c-fos/FOS and c-jun/JUN (PubMed:<a

href="http://www.uniprot.org/citations/12773393" target="\_blank">12773393</a>). May also phosphorylate 'Ser-28' of histone H3 (PubMed:<a

href="http://www.uniprot.org/citations/12773393" target="\_blank">12773393</a>). Mediates the mitogen- and stress-induced phosphorylation of high mobility group protein 1 (HMGN1/HMG14) (PubMed:<a href="http://www.uniprot.org/citations/12773393" target="\_blank">12773393</a>). In lipopolysaccharide-stimulated primary macrophages, acts downstream of the Toll-like receptor TLR4 to limit the production of pro-inflammatory cytokines (By similarity). Functions probably by inducing transcription of the MAP kinase phosphatase DUSP1 and the anti-inflammatory cytokine interleukin 10 (IL10), via CREB1 and ATF1 transcription factors (By similarity). Plays a role in neuronal cell death by mediating the downstream effects of excitotoxic injury (By similarity). Phosphorylates TRIM7 at 'Ser-107' in response to growth factor signaling via the MEK/ERK pathway, thereby stimulating its ubiquitin ligase activity (PubMed:<a href="http://www.uniprot.org/citations/25851810" target="blank">25851810</a>).

#### **Cellular Location**

Nucleus. Cytoplasm. Note=Predominantly nuclear. Exported into cytoplasm in response to glucocorticoid

# **Tissue Location**

Widely expressed with high levels in heart, brain and placenta. Less abundant in lung, kidney and liver

# Phospho-MSK1 (Ser360) Rabbit mAb - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- <u>Immunohistochemistry</u>
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
