

Histone H3.3 Rabbit mAb

Catalog # AP75548

Specification

Histone H3.3 Rabbit mAb - Product Information

Application Primary Accession Reactivity Host Clonality Calculated MW WB, IHC-P <u>P84243</u> Human, Mouse, Rat Rabbit Monoclonal Antibody 15328

Histone H3.3 Rabbit mAb - Additional Information

Gene ID 3020;3021

Other Names H3-3A

Dilution WB~~1/500-1/1000 IHC-P~~N/A

Format Liquid

Histone H3.3 Rabbit mAb - Protein Information

Name H3-3A (<u>HGNC:4764</u>)

Synonyms H3.3A, H3F3, H3F3A

Function

Variant histone H3 which replaces conventional H3 in a wide range of nucleosomes in active genes. Constitutes the predominant form of histone H3 in non-dividing cells and is incorporated into chromatin independently of DNA synthesis. Deposited at sites of nucleosomal displacement throughout transcribed genes, suggesting that it represents an epigenetic imprint of transcriptionally active chromatin. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.

Cellular Location Nucleus. Chromosome

Histone H3.3 Rabbit mAb - Protocols

Provided below are standard protocols that you may find useful for product applications.

- <u>Western Blot</u>
- <u>Blocking Peptides</u>
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
