# **DUSP6 Rabbit mAb - Protein Information**

Name DUSP6

Synonyms MKP3, PYST1

## **Function**

Dual specificity protein phosphatase, which mediates dephosphorylation and inactivation of MAP kinases (PubMed:<a href="http://www.uniprot.org/citations/8670865" target="\_blank">8670865</a>). Has a specificity for the ERK family (PubMed:<a href="http://www.uniprot.org/citations/8670865" target="\_blank">8670865</a>). Plays an important role in alleviating chronic postoperative pain (By similarity). Necessary for the normal dephosphorylation of the long-lasting phosphorylated forms of spinal MAPK1/3 and MAP kinase p38 induced by peripheral surgery, which drives the resolution of acute postoperative allodynia (By similarity). Also important for dephosphorylation of MAPK1/3 in local wound tissue, which further contributes to resolution of acute pain (By similarity). Promotes cell differentiation by regulating MAPK1/MAPK3 activity and regulating the expression of AP1 transcription factors (PubMed:<a href="http://www.uniprot.org/citations/29043977" target="\_blank">29043977</a>).

**Cellular Location** Cytoplasm.
