

NFKBIA Antibody (S32/36)
Affinity Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP7981b

Specification

NFKBIA Antibody (S32/36) - Product Information

Application	IF, FC, IHC-P, WB,E
Primary Accession	P25963
Other Accession	Q08353 , Q9Z1E3
Reactivity	Human
Predicted	Mouse, Pig
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	35609
Antigen Region	12-41

NFKBIA Antibody (S32/36) - Additional Information

Gene ID 4792

Other Names

NF-kappa-B inhibitor alpha, I-kappa-B-alpha, Ikb-alpha, IkappaBalpha, Major histocompatibility complex enhancer-binding protein MAD3, NFKBIA, IKBA, MAD3, NFKBI

Target/Specificity

This NFKBIA antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 12-41 amino acids from human NFKBIA.

Dilution

IF~~1:10~50
FC~~1:10~50
IHC-P~~1:50~100
WB~~1:1000
E~~Use at an assay dependent concentration.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

NFKBIA Antibody (S32/36) is for research use only and not for use in diagnostic or therapeutic procedures.

NFKBIA Antibody (S32/36) - Protein Information

Name NFKBIA

Synonyms IKBA, MAD3, NFKBI

Function Inhibits the activity of dimeric NF-kappa-B/REL complexes by trapping REL (RELA/p65 and NFKB1/p50) dimers in the cytoplasm by masking their nuclear localization signals (PubMed:[1493333](#), PubMed:[36651806](#), PubMed:[7479976](#)). On cellular stimulation by immune and pro-inflammatory responses, becomes phosphorylated promoting ubiquitination and degradation, enabling the dimeric RELA to translocate to the nucleus and activate transcription (PubMed:[7479976](#), PubMed:[7628694](#), PubMed:[7796813](#), PubMed:[7878466](#)).

Cellular Location

Cytoplasm. Nucleus. Note=Shuttles between the nucleus and the cytoplasm by a nuclear localization signal (NLS) and a CRM1-dependent nuclear export.

NFKBIA Antibody (S32/36) - Protocols

Provided below are standard protocols that you may find useful for product applications.

NFKBIA Antibody (S32/36) - Images

Confocal immunofluorescent analysis of NFKBIA Antibody (S32/36)(Cat#AP7981b) with ZR-75-1 cell followed by Alexa Fluor 488-conjugated goat anti-rabbit IgG (green). Actin filaments have been labeled with Alexa Fluor 555 phalloidin (red).

Western blot analysis of NFKBIA-S32/36 (Cat. #AP7981b) in HeLa cell line lysates (35ug/lane). NFKBIA (arrow) was detected using the purified Pab.

Formalin-fixed and paraffin-embedded human hepatocarcinoma with NFKBIA Antibody (S32/36), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.

Flow cytometric analysis of hela cells using NFKBIA Antibody (S32/36)(bottom histogram) compared to a negative control cell (top histogram). FITC-conjugated goat-anti-rabbit secondary antibodies were used for the analysis.

NFKBIA Antibody (S32/36) - Background

NFKB1 or NFKB2 is bound to REL, RELA, or RELB to form the NFKB complex. The NFKB complex is

inhibited by I-kappa-B proteins (NFKBIA or NFKBIB), which inactivate NF-kappa-B by trapping it in the cytoplasm. Phosphorylation of serine residues on the I-kappa-B proteins by kinases (IKBKA, IKBKB) marks them for destruction via the ubiquitination pathway, thereby allowing activation of the NF-kappa-B complex. Activated NFKB complex translocates into the nucleus and binds DNA at kappa-B-binding motifs such as 5-prime GGGRNNYYCC 3-prime or 5-prime HGGARNYYCC 3-prime (where H is A, C, or T; R is an A or G purine; and Y is a C or T pyrimidine).
